17 **Comments or remarks are to be provided at [cim@entsoe.eu](mailto:cim@entsoe.eu)**

18 **NOTE CONCERNING WORDING USED IN THIS DOCUMENT**

19 The force of the following words is modified by the requirement level of the document in which  
20 they are used.

- 21 • **SHALL:** This word, or the terms “REQUIRED” or “MUST”, means that the definition is an  
22 absolute requirement of the specification.
- 23 • **SHALL NOT:** This phrase, or the phrase “MUST NOT”, means that the definition is an  
24 absolute prohibition of the specification.
- 25 • **SHOULD:** This word, or the adjective “RECOMMENDED”, means that there may exist valid  
26 reasons in particular circumstances to ignore a particular item, but the full implications shall  
27 be understood and carefully weighed before choosing a different course.
- 28 • **SHOULD NOT:** This phrase, or the phrase “NOT RECOMMENDED”, means that there may  
29 exist valid reasons in particular circumstances when the particular behaviour is acceptable  
30 or even useful, but the full implications should be understood and the case carefully weighed  
31 before implementing any behaviour described with this label.
- 32 • **MAY:** This word, or the adjective “OPTIONAL”, means that an item is truly optional. One  
33 vendor may choose to include the item because a particular marketplace requires it or  
34 because the vendor feels that it enhances the product while another vendor may omit the  
35 same item. An implementation which does not include a particular option **SHALL** be  
36 prepared to interoperate with another implementation which does include the option, though  
37 perhaps with reduced functionality. In the same vein an implementation which does include  
38 a particular option **SHALL** be prepared to interoperate with another implementation which  
39 does not include the option (except, of course, for the feature the option provides.).

Version	Release	Date	Comments
0	1	2020-02-17	First draft
1	0	2020-11-04	Approved by MC.
1	1	2021-01-26	<p>Maintenance request MARI_04:</p> <p>Conditionally linked bids may by default be either available or not available. Introduced status values “conditionally available” and “unconditionally available” in BidTimeSeries status attribute. Introduced six new status values for unconditionally available bids in the links to bids in previous MTU periods, mirroring the existing six values that will apply to conditionally available bids.</p> <p>Removed reference to tolerance band since out of scope.</p> <p>Reflected in chapter 5.3.4 that net position limits are not necessarily submitted for both import and export.</p> <p>Most recent version of HVDC link schema will be used to avoid dummy EIC when submitting DFR for AC border.</p> <p>Higher version of Acknowledgement schema will be used to handle longer mRID.</p> <p>Editorial correction: Removed earlier draft references to technicalConditionality and commercialConditionality.</p>
1	2	2021-06-01	<p>Maintenance request MARI05:</p> <ul style="list-style-type: none"> <li>- EAR file shall cover one month in CET/CEST</li> <li>- rounding error output explicitly in EAR file</li> <li>- volumes and values of exchanged energy due to DA shall be output separately for positive and negative settlement prices</li> <li>- introduced ability to cancel interconnector flow constraint</li> </ul> <p>Editorial corrections:</p> <ul style="list-style-type: none"> <li>- Bid document may contain bids from scheduling areas that do not belong to sending TSO (Amprion submitting bids on behalf of all German TSOs, for example)</li> <li>- Period rather than Series_Period used in capacity document</li> <li>- Added clarification that BidAvailability document shall not be submitted for bids that were withdrawn due to erroneous submission</li> </ul> <p>Approved by MC.</p>

1	3	2022-02-01	<p>Maintenance request MARI06: When submitting CBCLs, if reason is provided it shall be associated with time series rather than header.</p> <p>Reason for unavailability associated with time series only, not with header.</p> <p>Reflected in dependency table of HVDC Link document that ID of interconnector is not mandatory. For AC interconnectors, it would typically not be populated.</p> <p>A simple bid may not be updated into a component of an exclusive or multipart bid.</p> <p>Editorial correction in dependency table for EAR: Replaced reference to B09 with C48 and C49 for DA also on series period level.</p> <p>Specified how to submit changes to bid availability in the unlikely event that the bid underwent changes at different points in time.</p> <p>Document describing changes to bid availability must cover exactly one MTU period.</p> <p>Demands in the MOL document may contain additional two reasons to indicate fully netting and/or bids activated in same direction.</p> <p>mFRR platform should be noted as sender of capacity documents toward transparency platform.</p> <p>Clarified that bids and elastic demands are reported in separate documents toward transparency platform.</p> <p>Transparency reporting of net positions will be done separately for SA and DA.</p> <p>Editorial correction in Note 2 in chapter 5.3.10: Role code referred to shall be A49 instead of A04.</p> <p>Specified in 5.4 that reflection of ramps in signalling is configurable.</p> <p>Maintenance request MARI07: Clarified that zero value shall be populated in activated quantity attribute of MOL document when bid rejected and demand not satisfied.</p> <p>Curve type defaults to A01 if excluded when submitting capacity or HVDC Link documents to mFRR platform.</p> <p>Approved by MC.</p>
---	---	------------	---

1	4	2022-05-10	<p>Maintenance request MARI08: TSO may request disconnection or decoupling by submitting Outage document.</p> <p>Clarified in chapter 5.3.2 what updates may be submitted to demands and within which timelines.</p> <p>Disaggregated transparency reporting of net positions with separate values for DA and SA will be implemented already by go-live.</p> <p>Identity of BSP must not be disclosed when reporting changes to bid availability.</p> <p>Editorial corrections.</p> <p>Approved by MC.</p>
1	5	2023-02-02	<p>Maintenance request MARI09:</p> <ul style="list-style-type: none"> <li>- CMM will submit CBCL and receive resulting XB flows</li> <li>- Affected TSO may exceptionally submit CBCL</li> <li>- Identity of TSO requesting CBCL adjustment may be included</li> <li>- Net position limits shall also be reported to transparency platform</li> <li>- Settlement data will be provided in the EAR per scheduling area, except for rounding error</li> <li>- Aggregated demand supported for control area only</li> <li>- An aggregated area may be disconnected</li> <li>- Enabled updates to disconnection and decoupling</li> <li>- Exchanged volumes will be reported to transparency platform also per border</li> <li>- mFRR platform will respond with a confirmation document to bid updates after T-12.</li> <li>- Clarified in chapter 5.3.1 that data providers may update the time interval of an unavailability document.</li> </ul> <p>Maintenance request MARI10:</p> <ul style="list-style-type: none"> <li>- Reporting of ramped net positions for the entire day to SA CE monitors</li> <li>- Reporting of net positions to VP/S</li> <li>- clarified concept of a bid being a component of a multipart or exclusive bbid</li> <li>- editorial corrections.</li> </ul> <p>Approved by ICTC.</p>

126	<b>1 Introduction</b>	
127	This document was drafted based on IEC 62325 series. In particular, the IEC 62325-450	
128	methodology was applied to develop the conceptual and assembly models.	

129 **2 Scope**

130 This implementation guide defines the data exchanges with the European platform for the  
131 exchange of balancing energy from frequency restoration reserves with manual activation, as  
132 mandated by article 20 of the electricity balancing guideline (EB GL).

133 **3 Normative references**

134 The following documents, in whole or in part, are normatively referenced in this document and  
135 are indispensable for its application. For dated references, only the edition cited applies. For  
136 undated references, the latest edition of the referenced document (including any amendments)  
137 applies.

170 All schemas are available for download from the ENTSO-E website.

### 171 3.2 Applicable protocols for file based data exchange

172 For file-based data exchange the following protocols will be supported:

- 173 - MADES (IEC 62325-503)
- 174 - web services (IEC 62325-504)
- 175 - EDX protocol

## 176 4 Terms and definitions

### 177 AOF

178 Activation Optimisation Function; as defined by EB GL article 2(39)

### 179 activation period

180 For the mFRR standard product, the activation period starts in the middle of ramp-up and  
181 ends in the middle of ramp-down. For scheduled activations the activation period is equal to  
182 15 minutes and coincides with the MTU period that is being optimized by the AOF. For direct  
183 activations the activation period may have a duration from 15 minutes up to 30 minutes,

- 184 starting during the MTU period being optimized by the AOF and ending with the following  
185 MTU period.
- 186 **Affected TSO**  
187 As defined by SO GL article 3(94)
- 188 **area**  
189 Unless explicitly specified, area may refer to either a scheduling area, LFC area, control  
190 area, LFC control block or an aggregation thereof.
- 191 **Balancing service provider (BSP)**  
192 As defined by EB GL art. 2(6)
- 193 **bid**  
194 Data represented in BidDocument by BidTimeSeries.
- 195 **CBCL**  
196 Cross-border capacity limit
- 197 **CMM**  
198 Capacity Management Module — the platform dedicated to calculating the cross-zonal  
199 capacity limits within the balancing timeframe.
- 200 **component**  
201 a bid which is part of a multipart or exclusive group of bids
- 202 **Direct activation (DA)**  
203 direct activation can be initiated at any point in time after scheduled optimization has begun  
204 for given MTU period
- 205 **GCT**  
206 Gate closure time
- 207 **HVDC**  
208 High voltage direct current
- 209 **IF**  
210 Implementation Framework
- 211 **mFRR**  
212 Manual frequency restoration reserves; active power reserves that may be manually  
213 activated, available to restore system frequency to the nominal frequency and, for a  
214 synchronous area consisting of more than one LFC area, to restore power balance to the  
215 scheduled value.
- 216 **MTU**  
217 Market Time Unit
- 218 **VP/S**  
219 Verification Platform Scheduling
- 220 **SA CE**  
221 Synchronous Area Continental Europe
- 222 **scheduled activation (SA)**  
223 scheduled activation can be initiated only at a specific point in time in relation to given MTU  
224 period
- 225 **simple bid**  
226 A bid which is not a component of a multipart or exclusive group of bids
- 227 **XB**  
228 Cross-border
- 229 **XB flows**  
230 Cross-border flows in the context of this document is equivalent to cross-border schedules

231

232 **5 The manual frequency restoration reserve business process for standard**  
233 **products**

234 **5.1 General overview**

235 The common mFRR platform is dedicated to the mFRR process only and will therefore, as a  
236 general rule, receive input data and produce output data that is related to the mFRR timeframe  
237 only<sup>1</sup>. The platform has a number of operational phases that will be carried out continuously 24  
238 \* 7:

239

240 **Figure 1: Manual frequency restoration reserve process in common platform —**  
241 **overview**

242 The common platform’s operational phases outlined in Figure 1 exhibits the timing in order to  
243 satisfy a fifteen minute scheduled activation period starting at T and ending at T+15. All timings  
244 throughout the whole document are expressed in minutes and relative to the start of the market  
245 time unit for which activations are optimised by the platform (MTU0).

246 At T-120 the gate opens for submissions of all types of data from TSOs and the CMM to the  
247 mFRR platform, except for demands for direct activations.

248 TSO gate closure for balancing energy bids occurs at T-12.

249 Gate closure for demands for scheduled activations, CBCLs and interconnector flow constraints  
250 occurs at T-10. Note that updates to CBCLs may be submitted continuously.

251 Between T-10 and T-8.5 the mFRR platform with its AOF selects bids to satisfy the demands  
252 for scheduled activations, determines the cross-border marginal prices and calculates the

<sup>1</sup> The only exception to this rule is the input HVDC and AC schedules. Please refer to 5.3.6 for further details.

253 cross-border flows. In the subsequent results communication and verification phase between  
254 T-8.5 and T-8, the resulting net positions, cross-border flows and remaining capacity are sent  
255 to TSOs together with cross-border marginal prices and the bids selected for activation and the  
256 satisfied demands. The net positions and cross-border flows are also sent to the SA CE  
257 monitor. The resulting cross-border flows are sent to CMM.

258 At T-8 the scheduled activation phase begins during which bids selected by the AOF are  
259 communicated by each TSO to their respective BSPs. At T-7.5, scheduled activation is initiated.

260 Delivery of balancing energy for scheduled activations, including ramping, occurs between T-5  
261 and T+20. This is also the time interval during which corresponding signalling will occur.

262 TSOs may submit their demands for direct activation from T-10 until T+5. Processing of such  
263 demands will have to wait until the AOF completes optimisation of the scheduled activations.  
264 Likewise, if the AOF is already busy processing one or several demands for direct activations,  
265 any subsequently arriving demands for direct activations will have to wait until the AOF finishes.

266 Delivery of balancing energy for direct activations, including ramping, may start at any point in  
267 time between T-5 and T+10, depending on when the demand(s) arrived on the platform. The  
268 delivery will always end at T+35. This is also the time interval during which corresponding  
269 signalling will occur.

270 As soon as the AOF has finished processing a set of demands for direct activations the cross-  
271 border flows, remaining capacity and net positions are sent to TSOs together with the selected  
272 bids and satisfied demands. It should be noted that the activation period for direct activations  
273 stretches until T+30, i.e. until end of following quarter hour.

274 At T+5, reporting of net positions to the VP/S occurs.

275 Settlement prices related to the energy delivered in MTU1 for direct activations submitted for  
276 MTU0 can only be determined and distributed to TSO by T+7, after the scheduled optimisation  
277 for MTU1.

278 By T+40 the latest, TSOs submit the detailed reasons for changes to bid availability.

279 By T+45 the latest reporting of data to the ENTSO-E central transparency platform shall occur.

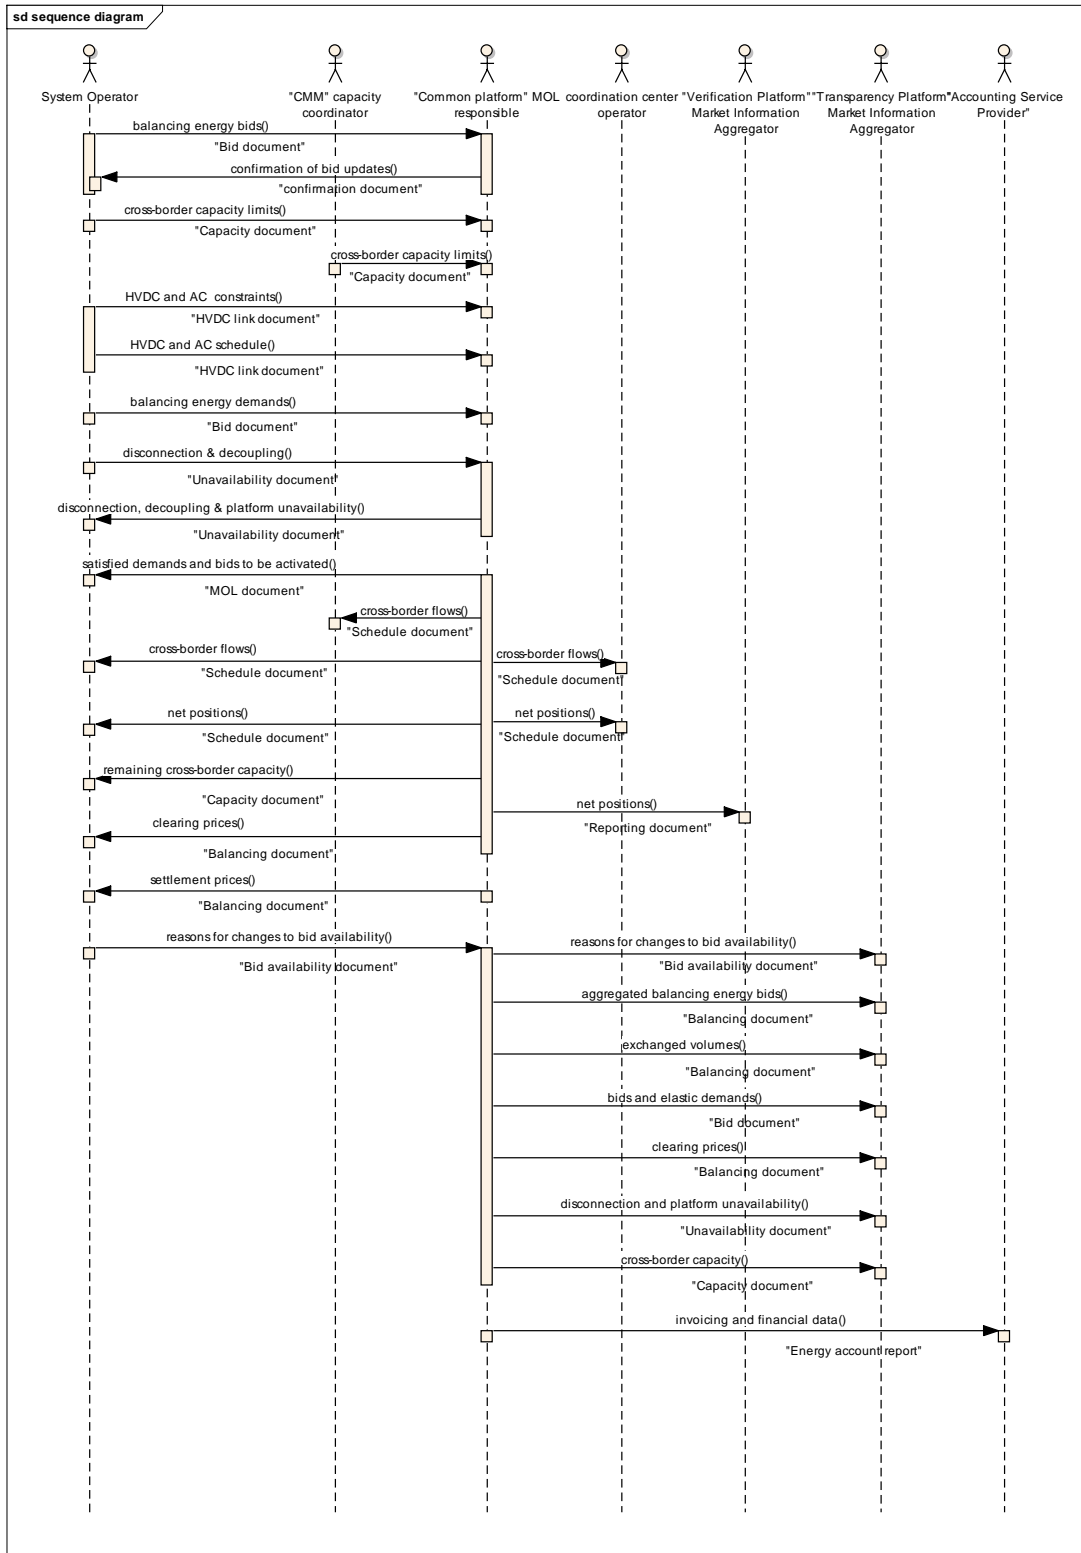

280 Up until T+5, TSOs may submit an unavailability document requesting its disconnection or  
281 decoupling. Whenever a TSO is disconnected or decoupled from the mFRR process or the  
282 platform experiences a failure or becomes unavailable, the platform will send an unavailability  
283 document to all participating TSOs.

284 The platform will respond with a confirmation document when TSO submits an updated bid file  
285 after T-12.

286  
287 Net positions with ramping are output once per CET/CEST day before midnight to SA CE  
288 monitors.

289 **5.2 Overall business context**

290 This Implementation Guide provides the means of exchanging between the common platform  
291 and all concerned parties the information necessary to fulfill the process requirements outlined  
292 in paragraph 5.1.

293

294 **Figure 2: The manual frequency restoration reserve process in common platform —**  
295 **sequence diagram**

296 The illustration above depicts file exchanges only. Real-time signaling is detailed in chapter  
297 5.4.

298 The information flows under normal operating conditions are outlined in the following  
299 paragraphs. Data exchanges related to missing, rejected or conflicting data will be described in  
300 the mFRR operational handbook.

### 301 **5.2.1 Balancing energy bids**

302 Participating TSOs submit to the common platform all balancing energy bids for the standard  
303 mFRR product. Bids may be freely updated up until the TSO gate closure for balancing energy  
304 bids at T-12 while respecting the limitations stated in chapter 5.3.2.

305 Changes in availability, activation type or in the offered volume of energy bids may be submitted  
306 at any time, however if submitted after T-10 such updates will be taken into account during  
307 subsequent direct activations only.

### 308 **5.2.2 Confirmation of bid updates**

309 The common platform will respond with a confirmation document to the TSO whenever an  
310 updated bid document is submitted after T-12.

### 311 **5.2.3 Cross-border capacity limits**

312 The CMM provides to the common platform the cross-border capacity limits (CBCLs) as well as  
313 any applicable technical profiles or net position limits. This information will be used by the AOF  
314 when selecting energy bids to satisfy the demands for scheduled and direct activations.

315 Exceptionally, participating TSOs and non-participating but affected TSOs may submit CBCLs.  
316 TSOs that have not yet acceded to CMM will continue to submit CBCLs, net position limits and  
317 technical profiles directly to the mFRR platform.

318 CMM and TSOs may submit updates to cross-border capacity limits at any point in time and  
319 such updates will be taken into account by the mFRR platform in the next execution of the AOF  
320 (for scheduled or direct activation, as applicable) according to specific business rules,  
321 depending on the point in time when the update was submitted and whether the AOF is in the  
322 process of generating new cross-border flows.

### 323 **5.2.4 HVDC and AC constraints**

324 Optionally, the TSOs may provide to the common platform constraints related to high voltage  
325 direct current (HVDC) lines. Such constraints may also be submitted for AC links for  
326 countertrading purposes.

### 327 **5.2.5 HVDC and AC schedules**

328 TSOs submitting constraints to the common platform for HVDC or AC lines must also provide  
329 the schedules for the lines. In some cases the schedule may be provided by the operator of the  
330 line. The schedule must always be provided for a line having a deadzone.

### 331 **5.2.6 Balancing energy demands**

332 Participating TSOs submit to the common platform their demands for balancing energy for  
333 scheduled and direct activations, respectively, referring to a specific MTU period. While all  
334 demands for scheduled activations have to be submitted by the TSO gate closure at T-10  
335 (relevant to the beginning of the specific MTU period), the demands for direct activations may  
336 subsequently be submitted at any point in time up until T+5 (relevant to the beginning of the  
337 specific MTU period).

338 A demand for direct activation may be updated up until the point in time when the AOF starts  
339 processing it.

### 340 **5.2.7 Satisfied demands and bids to be activated**

341 After execution of the AOF for scheduled and direct activations respectively, the common  
342 platform sends to each participating TSO the satisfied demands and the bids selected for  
343 activation.

344 **5.2.8 Cross-border flows**

345 The common platform informs the participating TSOs and the CMM of the cross-border flows  
346 resulting from scheduled and direct activations, respectively. In some cases the resulting cross-  
347 border flows may be sent to operator of interconnector. Subject to configuration in the common  
348 platform, the resulting cross-border flows may be communicated in an EDI document, a signal,  
349 or a combination of both.

350 SA CE monitor will also receive the cross-border flows on all internal and external borders of  
351 the SA CE.

352 **5.2.9 Net position**

353 Each TSO receives from the common platform the net position for its LFC area or scheduling  
354 areas as resulting from scheduled and direct activations, respectively. SA CE monitor will also  
355 receive the net positions for all areas within the SA CE. Subject to configuration in the common  
356 platform, the resulting net positions may be communicated in an EDI document, a signal, or a  
357 combination of both.

358 Once for every MTU period, the common platform reports the net positions to the VP/S.

359 Once per CET/CEST day before midnight, the common platform outputs the net positions toward  
360 the SA CE monitors. The net positions are expressed with ramping, as single values aggregated  
361 for both scheduled and direct activations but separately for flows on AC and DC links,  
362 respectively.

363 **5.2.10 Remaining cross-border capacity**

364 The common platform notifies the participating TSOs of any cross-border capacity that remains  
365 unused after the optimization of the scheduled and direct activations, respectively.

366 **5.2.11 Clearing prices**

367 After completion of the optimization of scheduled activations, the common platform provides  
368 the clearing prices to the TSOs.

369 **5.2.12 Settlement prices**

370 At T+7, after completion of the optimization of scheduled activations for the following quarter  
371 hour, the common platform distributes to TSOs the settlement prices for direct activations.

372 **5.2.13 Detailed reasons for changes to bid availability**

373 By T+40 the latest, TSOs submit to the common platform the detailed reasons for changes to  
374 bid availability.

375 **5.2.14 Outages**

376 Up until T+5, TSOs may submit an unavailability document requesting its disconnection or  
377 decoupling.

378 Whenever a TSO is disconnected or decoupled or the common platform becomes unavailable  
379 or experiences a failure, the common platform sends an unavailability document to all TSOs  
380 participating in the process.

381 **5.2.15 Transparency reporting**

382 The common platform submits clearing prices, all balancing energy bids and an aggregation of  
383 all balancing energy bids to the ENTSO-E central transparency platform for publication as  
384 required under TR article 17.1.f and EB GL articles 12.3.b&c and 12.3.e.

385 Elastic demands are reported as required by article 3.4 of the mFRR IF. Disconnection of a  
386 TSO and unavailability or failure of the mFRR platform are reported in accordance with article  
387 3.11 of the mFRR IF. Detailed reasons for changes to bid availability are reported as required  
388 by articles 9.7 and 9.9 of the mFRR IF.

389 CBCLs, net position limits and technical profiles and their adjustments due to operational  
390 security reasons are reported as required by articles 4.3 and 4.4 of the mFRR IF.

391 Net positions and exchanged volumes per border are reported as required by article 3.17 of the  
392 mFRR IF.

393 **5.2.16 Invoicing and financial data**

394 The common platform provides the financial information to the entity that will carry out financial  
395 settlement between the TSOs.

396 **5.3 Business rules**

397 **5.3.1 General rules**

398 For each file-based electronic data interchange defined in this document, an acknowledgement  
399 document, as defined in IEC 62325-451-1, should be generated either accepting the whole  
400 received document or rejecting it completely. Problem documents may be exchanged in  
401 exceptional circumstances, as outlined by the operational handbook.

402 The business process described in this chapter will be executed separately for each region,  
403 also referred to as virtual scheduling area. For manual frequency restoration reserves, the  
404 following regions shall apply:

405 **Table 2 – Region codes**

Region	EIC code	Geographical scope
mFRR virtual scheduling area	10Y1001C—00085O	scheduling areas of all TSOs participating in the mFRR process

406  
407 In all documents the single applicable coding scheme shall be A01 = EIC coding scheme.

408 For Reserve Bid Market Documents, data providers may submit higher versions containing  
409 updated bids only as detailed in chapter 5.3.2. For unavailability documents, data providers  
410 may modify the time interval described by the document to reflect a replanned disconnection or  
411 decoupling. For all other documents, higher versions must contain the same number of time  
412 series and cover the same time interval.

413 The mFRR platform will as far as technically feasible validate that submitted data complies with  
414 the business rules and permitted combinations of attributes as articulated by this  
415 implementation guide. Any data submission that fails such validation will be rejected by the  
416 platform.

417 TSO shall not submit a higher version of a document before it has received acknowledgement  
418 of previous version. This rule must be implemented locally. A data submission that violates this  
419 rule may result in data not processed properly by the mFRR platform; bids may be ignored, for  
420 example.

421 By default, the data exchanged with System Operators describe scheduling areas. However,  
422 data exchanged with Amprion in its role as System Operator will always refer to the LFC area  
423 covering the control areas of Amprion and Creos. Likewise, the corresponding transparency  
424 publications will also refer to this LFC area.

425 **5.3.2 Dependencies governing the ReserveBid\_MarketDocument**

426 The reserve bid market document is used to provide all the information related to bids and demands that are submitted to the common platform. It is  
427 also used to submit all bids to the ENTSO-E central transparency platform. See Table 4 for submissions to the Transparency platform

428 All demands for scheduled activation from a given TSO (both elastic and inelastic) must be placed within a single document. Bids may be distributed  
429 among more than one document, at the discretion of the TSO. The TSO is responsible for ensuring unique bid identifiers (in the mRID attribute of  
430 BidTimeSeries) across all documents. Each TSO is expected to submit at least one bid for every MTU period. Bids and demands must be submitted  
431 in separate documents.

432 If TSO wants to update one or several bids or demands that have already been submitted to the platform, it is sufficient to include only the  
433 corresponding time series in a document with higher version. Unchanged bids and demands do not have to be repeated. A higher version of the Bid  
434 Document only updates the bids or demands contained within the document, while all other bids or demands not described by the higher version  
435 remain unchanged within the platform. Platform will reject a higher version of a Bid document that introduces multipartBidIdentification or  
436 exclusiveBidsIdentification in a bid that previously did not contain such attribute.

437 Platform will reject bid document containing links to bids submitted in other documents that have not yet been positively acknowledged. Therefore,  
438 data provider should wait for acknowledgements of bid documents for earlier MTU periods before submitting bid document containing links to bids in  
439 those earlier MTU periods.

440 After TSO gate closure for submission of balancing energy bids at T-12, only updates to bid availability (i.e. status attribute), activation type (i.e.  
441 standard\_MarketProduct.marketProductType attribute) and to the offered volume (i.e quantity.quantity attribute) are permitted. In the status attribute,  
442 the following changes are then permitted :

- 443 - change the value from A65=Conditionally available or A66=Conditionally unavailable to A11=Unavailable, or vice versa, while respecting the
- 444 basic rule that conditional links must have been provided in Linked\_BidTimeSeries before T-12
- 445 - change the value from A06=Available to A11=Unavailable, or vice versa

446 Demands for scheduled activation may be updated until T-10. Demands for direct activation may be updated until T+5 as long as the mFRR platform  
447 has not yet processed them. The followings attributes may be modified: Status, needed quantity (i.e quantity.quantity attribute), direction, price and  
448 reason code.

449 If TSO wants to withdraw a single demand or bid that erroneously has already been submitted to the platform, it is necessary to submit a higher  
450 version of the same document and mark the bid or demand as unavailable in the Status attribute.

451 Table 3 provides the dependencies for the reserve bid market document when TSOs submit bids and demands to the common platform.

452

453

**Table 3 – Reserve bid market document dependency table (submissions of bids and demands to common platform)**

		BIDS	DEMANDS	XSD requirements
<b>ReserveBid_MarketDocument</b>				
mRID	Unique identification of the Bid Document	Used	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Used	Mandatory
type	A37 = Reserve Bid document B21 = Reserve need document	A37	B21	Mandatory
process.processType	A47 = Manual frequency restoration reserve	Used	Used	Conditional
sender_MarketParticipant.mRID	EIC of the transmitting TSO	Used	Used	Mandatory
sender_MarketParticipant.marketRole.type	A04 = System Operator	Used	Used	Mandatory
receiver_MarketParticipant.mRID	EIC of common platform operator: 10X1001C--00009H	Used	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Used	Mandatory
reserveBid_Period.timeInterval	The MTU period that the bids or demands within the document refer to. Always of 15 minutes length.	Used	Used	Mandatory
domain.mRID	EIC of region	Used	Used	Mandatory
subject_MarketParticipant.mRID	EIC of the transmitting TSO	Used	Used	Mandatory
subject_MarketParticipant.marketRole.type	A27 = Resource Provider	Used	Used	Mandatory

454

<b>BidTimeSeries</b>				
mRID	Unique identification of the bid or demand assigned by the transmitting TSO	Used	Used	Mandatory
auction.mRID	Constant value of "AUCTION-mFRR".	Used	Used	Mandatory
businessType	B74 = Offer B75 = Need	B74 = Offer	B75 = Need	Mandatory

acquiring_Domain.mRID	For bids it corresponds to the EIC identification of the region. For demands it corresponds to the EIC identification of a scheduling area or control area	Region	Used	Mandatory
connecting_Domain.mRID	For bids it corresponds to the EIC identification of the scheduling area providing the reserves. Associated multipart, technically linked, conditional and exclusive bids must be associated with the same area. For demands it corresponds to the EIC identification of the region providing the reserves	Used	Region	Mandatory
provider_MarketParticipant.mRID	The balance service provider (BSP) identification.	May be used	Not used	Conditional
quantity_Measure_Unit.name	MAW = Megawatts	Used	Used	Mandatory
currency_Unit.name	EUR = Euro. This currency is only provided in the case of a demand where there is a price in the point class. For bids it is always populated.	Used	May be used	Conditional
price_Measure_Unit.name	MWH = Megawatt hours.	Not used	Not used	Conditional
divisible	A01 = quantity may be reduced to the minimum activation quantity by increments of the StepIncrementQuantity A02 = No reduction possible on the quantity	Used	A01	Mandatory
linkedBidsIdentification	The identification used to associate bids that are to be technically linked together. If the bid is not linked then the attribute is not used.	May be used. See note 1 below.	Not used	Conditional
multipartBidIdentification	The identification used to associate components of a multipart bid. If bid with flowDirection.direction=A01 (Up) is accepted then all associated bids with lower price must also be accepted. If bid with flowDirection.direction=A02 (Down) is accepted then all associated bids with higher price must also be accepted. If the bid is not a component of a multipart bid then the attribute is not used.	May be used. See note 2 below.	Not used	Conditional
exclusiveBidsIdentification	The identification used to associate components of an exclusive bid. If bid is accepted then all others with same identification shall be ignored. If the bid is not a component of an exclusive bid then the attribute is not used.	May be used. See note 2 below.	Not used	Conditional
blockBid	Not used. Redundant due to the existence of Divisible attribute.	Not used	Not used	Optional
status	A06 = Available A11 = Unavailable A65 = Conditionally available A66 = Conditionally unavailable  Associated components of multipart or exclusive bids must have the same status. A65 or A66 must be used when bid is conditionally linked, i.e. having one or several instances of Linked_BidTimeSeries. A65 or A66 shall not be used for demands or components of multipart and exclusive bids.	Used	Used	Conditional
priority	A sequential number indicating the priority of the bid in relation to other bids	Not used	Not used	Conditional

registeredResource.mRID	The identification of the resource used to provide the reserves	May be used	Not used	Conditional
flowDirection.direction	A01 = UP A02 = DOWN Refer to the price payment table for use in relation to price.  Components of a multipart bid shall have the same direction.	Used	Used	Mandatory
stepIncrementQuantity	Not used. For needs and divisible offers the input step increment has been harmonised to 1 MW.	Not used	Not used	Conditional
energyPrice_Measure_Unit.name	MWH = Megawatt hours This unit of measure is only provided in the case of a demand where there is a price in the point class. For bids it is always populated.	Used	Used for elastic demands	Conditional
marketAgreement.type	The type of the market agreement	Not used	Not used	Conditional
marketAgreement.mRID	Not used	Not used	Not used	Conditional
marketAgreement.createdDateTime	Time stamp used to identify the date and time that a specific offer was received.	Not used	Not used	Conditional
activation_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
resting_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
minimum_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
maximum_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
standard_MarketProduct.marketProductType	A05 = Standard mFRR product eligible for scheduled activation only A06 = Standard mFRR product eligible for direct activation only A07 = Standard mFRR product eligible for scheduled and direct activation  For bids, any of the three values may be used. Components of a multipart or exclusive bid must have the same value.  A05 shall be used to indicate a demand for scheduled activation. A06 shall be used to indicate a demand for direct activation. A07 shall not be used for demands.	A05 A06 A07	A05 A06	Conditional

455

original_MarketProduct.marketProductType	Used when the bid has been converted into a standard product: A02 = Specific product A03 = Integrated scheduling process Components of a multipart or exclusive bid must have the same value.	May be used	Not used	Conditional
--	--	-------------	----------	-------------

456  
457

validity_Period.timeInterval	The period when the bid can be activated	Not used	Not used	Optional
procuredFor_MarketParticipant	EIC code of TSO for which bid was procured. Must be populated when the capacity was procured on behalf of other TSO. Not populated otherwise. Associated multipart, or exclusive bids must have the same value. See note 3 below.	May be used	Not used	Conditional
sharedWith_MarketParticipant	EIC code of TSO sharing the reserve. Must be populated when capacity constitutes a shared reserve. Not populated otherwise. Associated multipart or exclusive bids must have the same value. See note 3 below.	May be used	Not used	Conditional

458

459 Note 1: The attributed linkedBidIdentification may be used to associate technically linked bids in different MTU periods. Within a given MTU period,  
460 there may not be more than one bid having the same value in linkedBidIdentification. The following rule for technically linked bids will always be  
461 applied by the platform to bids having the same value in linkedBidIdentification: If bid in MTU-1 was subject to direct activation the bid in MTU0 is not  
462 available.

463

464 Note 2: A given bid can not be a component of an exclusive and multipart bid at the same time. Therefore, the attributes exclusiveBidIdentification  
465 and multipartBidIdentification cannot be used in combination for the same bid. It is the responsibility of data provider to ensure uniqueness of  
466 exclusiveBidsIdentification and multipartBidIdentification across all documents and MTU periods. It is permitted to have technical links between  
467 exclusive and multipart bids in different MTU periods. Therefore, the attribute exclusiveBidIdentification may be combined with attribute  
468 linkedBidIdentification and the attribute multipartBidIdentification may be combined with attribute linkedBidIdentification.

469

470 All components of a multipart bid (i.e. having the same value in multipartBidIdentification) with a technical link to a bid in another MTU period must  
471 have the same value in the linkedBidIdentification attribute. The same applies to all components of an exclusive bid (i.e. having the same value in  
472 exclusiveBidsIdentification) with a technical link to a bid in another MTU period.

473

474 Note 3: The attributes procuredFor\_MarketParticipant and sharedWith\_MarketParticipant are mutually exclusive. There may be several instances of  
475 sharedWith\_MarketParticipant — this is the case when the reserve is shared among three or more TSOs.

476

477

Period				
timeInterval	A time interval that coincides with the quarter hour described in reserveBid_Period.timeInterval.	Used	Used	Mandatory

resolution	PT15M	Used	Used	Mandatory
<b>Point</b>				
position	Position within the time interval	Used	Used	Mandatory
quantity.quantity	Quantity offered or needed with 1 MW precision.	Quantity offered	Quantity needed	Mandatory
minimum_Quantity.quantity	Required if divisible = A01. Precision is 1 MW.	May be used	0	Conditional
price.amount	Not used	Not used	Not used	Conditional
energy_Price.amount	The price of the product. Precision is 0.01. Components of a multipart bid must have different prices. Note: Refer to the Price payment table for establishing who is paid.	Used	Used for elastic demands	Conditional
<b>AvailableMBA_Domain (Associated with time series)</b>	Not used	Not used	Not used	<b>Conditional</b>
mRID				
<b>Reason (associated with BidTimeSeries)</b>	Optionally exactly one instance of Reason may be associated with the BidTimeSeries.	May be used	May be used	<b>Conditional</b>
code	For a bidTimeSeries with status = A11 (Unavailable) one of the following codes may be used to specify the activation purpose of a bid: B55 = Because of redispatching B56 = Because of countertrading B57 = Because of other remedial action Exceptionally the code B18 = Failure shall be used to indicate that a bid or demand has been submitted erroneously. Associated multipart or exclusive bids must have the same value.  If the purpose of a demand is other than for balancing purposes the code A96 = Technical constraint shall be used	May be used. See note 4 below.	May be used	Conditional
text	Textual information provided by the TSO	Not used	Not used	

479 Note 4: The normal reasons for bid unavailability will be conveyed by the dedicated BidAvailability\_MarketDocument described in chapter 5.3.12.  
480

Linked_BidTimeSeries (associated with BidTimeSeries)	May be used to indicate conditional dependencies upon bids in earlier MTU periods	May be used	Not used	Conditional
mRID	mRID of a simple bid in MTU-1 or MTU-2	Used	Not used	Mandatory
status	One of the following values shall be used when bid in MTU0 is conditionally available, i.e. BidTimeSeries.status = A65: A55 = Not available if linked bid activated A56 = Not available if linked bid rejected A59 = Not available if linked bid subject to SA A60 = Not available if linked bid subject to DA A57 = Not available for DA if linked bid subject to DA A58 = Not available for DA if linked bid subject to SA  One of the following values shall be used when bid in MTU0 is conditionally unavailable, i.e. BidTimeSeries.status = A66: A67 = Available if linked bid activated A68 = Available if linked bid rejected A69 = Available if linked bid subject to SA A70 = Available if linked bid subject to DA A71 = Available for DA if linked bid subject to DA A72 = Available for DA if linked bid subject to SA	Used	Not used	Conditional

481 Components of multipart or exclusive bids may not be conditionally linked. Therefore, no instances of Linked\_BidTimeSeries are permitted when  
482 multipartBidIdentification or exclusiveBidsIdentification have been populated. Conditional and technical links between two bids are permitted however  
483 in such case both must be simple bids.  
484

485  
486 For a simple bid there may be up to six instances of Linked\_BidTimeSeries, with no more than three instances referring to bids in MTU-1 and no more  
487 than three instances referring to bids in MTU-2. The referenced bid in MTU-1 or MTU-2 must always be a simple bid. There may not be more than  
488 one link to any given bid, hence the mRIDs must be unique.  
489

490 The mFRR platform will apply the following rules:  
491 - A conditionally available bid in MTU0 (i.e. bid with status A65) becomes completely unavailable when at least one of the conditional links  
492 indicate unavailability due to the outcome of the linked bid in MTU-1 or MTU-2  
493 - A conditionally available bid in MTU0 becomes unavailable for direct activation when at least one of the conditional links indicate unavailability  
494 for direct activation due to the outcome of the linked bid in MTU-1 or MTU-2  
495 - A conditionally unavailable bid in MTU0 (i.e. bid with status A66) becomes available when at least one of the conditional links indicate  
496 availability due to the outcome of the linked bid in MTU-1 or MTU-2  
497 - A conditionally unavailable bid in MTU0 becomes available for direct activation when at least one of the conditional links indicate availability  
498 for direct activation due to the outcome of the linked bid in MTU-1 or MTU-2  
499

500 Table 4 provides the dependencies for the reserve bid market document when the common platform submits bids to the ENTSO-E transparency  
501 platform as required by EB GL articles 12.3.b&c and elastic demands as required by the mFRR IF article 3.4. A separate document will be sent for  
502 every area. Bids and demands are reported in separate documents.

503 **Table 4 – Reserve bid market document dependency table (balancing energy bids and elastic demands submitted to transparency**  
504 **platform)**

		BIDS	DEMANDS	XSD requirements
<b>ReserveBid_MarketDocument</b>				
mRID	Unique identification of the Bid Document	Used	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Used	Mandatory
type	A37 = Reserve Bid document	Used	Used	Mandatory
process.processType	A47=Manual frequency restoration reserve	Used	Used	Conditional
sender_MarketParticipant.mRID	EIC of common platform operator: 10X1001C--00009H	Used	Used	Mandatory
sender_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Used	Mandatory
receiver_MarketParticipant.mRID	10X1001A1001A450 = EIC of the ENTSO-E transparency platform	Used	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A32 = Market information aggregator	Used	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Used	Mandatory
reserveBid_Period.timeInterval	The duration of the MTU period (15 minutes)	Used	Used	Mandatory
domain.mRID	EIC of the region	Used	Used	Mandatory
subject_MarketParticipant.mRID	EIC of common platform Operator	Used	Used	Mandatory
subject_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Used	Mandatory

505

<b>BidTimeSeries</b>				
mRID	Unique identification of the bid or demand assigned by the transmitting TSO	Used	Used	Mandatory

auction.mRID	Constant value of "AUCTION-mFRR".	Used	Used	Mandatory
businessType	B74 = Offer B75 = Need	B74 = Offer	B75 = Need	Mandatory
acquiring_Domain.mRID	For bids it corresponds to the EIC identification of the region For demands it corresponds to the EIC identification of the scheduling area or control area	Region	Used	Mandatory
connecting_Domain.mRID	For bids it corresponds to the EIC identification of the scheduling area providing the reserves. For demands it corresponds to the EIC identification of the region providing the reserves	Used	Region	Mandatory
provider_MarketParticipant.mRID	The balance service provider (BSP) identification	Not used	Not used	Conditional
quantity_Measure_Unit.name	MAW = Megawatts	Used	Used	Mandatory
currency_Unit.name	EUR = Euro	Used	Used	Conditional
price_Measure_Unit.name	MWH = Megawatt hours	Not used	Not used	Conditional
divisible	A01 = quantity may be reduced to the minimum activation quantity A02 = No reduction possible on the quantity	A01 or A02	A01	Mandatory
linkedBidsIdentification	Not used	Not used	Not used	Conditional
multipartBidIdentification	Populated if the bid is multipart	May be used	Not used	Conditional
exclusiveBidsIdentification	Populated if the bid is exclusive	May be used	Not used	Conditional
blockBid	Not used. Redundant due to the existence of Divisible attribute.	Not used	Not used	Optional
status	A06 = Available A11 = Unavailable	Used	Not used	Conditional
priority	A sequential number indicating the priority of the bid in relation to other bids	Not used	Not used	Conditional
registeredResource.mRID	The identification of the resource used to provide the reserves	Not used	Not used	Conditional
flowDirection.direction	A01 = UP A02 = DOWN Refer to the price payment table for use in relation to price	Used	Used	Mandatory

stepIncrementQuantity	Not used. For demands and divisible bids the input step increment has been harmonised to 1 MW.	Not used	Not used	Conditional
energyPrice_Measure_Unit.name	MWH = Megawatt hours	Used	Used	Conditional
marketAgreement.type	The type of the market agreement	Not used	Not used	Conditional
marketAgreement.mRID	Not used	Not used	Not used	Conditional
marketAgreement.createdDateTime	Time stamp used to identify the date and time that a specific offer was received.	Not used	Not used	Conditional
activation_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
resting_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
minimum_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
maximum_ConstraintDuration.duration	Not used	Not used	Not used	Conditional
standard_MarketProduct.marketProductType	The type of product that the bid or demand refers to: A05 = Standard mFRR product eligible for scheduled activation only A07 = Standard mFRR product eligible for scheduled and direct activation  See note 1 below.	A05 A07	A05	Conditional
original_MarketProduct.marketProductType	Used when the bid refers to a specific product that has been converted into a standard product: A02 = Specific product A03 = Integrated scheduling process	May be used	Not used	Conditional
validity_Period.timeInterval	The period when the bid can be activated	Used	Not used	Conditional

procuredFor_MarketParticipant		Not used	Not used	Conditional
sharedWith_MarketParticipant		Not used	Not used	Conditional
<b>Period</b>				
timeInterval	A time interval that coincides with the MTU period	Used	Used	Mandatory
resolution	PT15M	Used	Used	Mandatory
<b>Point</b>				
position	Position within the time interval	Used	Used	Mandatory
quantity.quantity	Quantity offered or requested with 1 MW precision	Used	Used	Mandatory
minimum_Quantity.quantity		Not used	Not used	Conditional
price.amount		Not used	Not used	Conditional
energy_Price.amount	The price of the product. Precision is 0.01. Refer to the Price payment table for establishing who is paid.	Used	Used	Conditional

status		Not used	Not used	Conditional

513  
514

### 5.3.3 Determination of final bid availability within mFRR platform

The final availability of a bid for scheduled and/or direct activation may potentially be influenced by up to three different mechanisms, which the mFRR platform will apply in the following descending order of precedence:

- 518 1. Unavailability as foreseen by EB GL art. 29(14), represented by status attribute in BidTimeSeries
- 519 2. Activation type, represented by attribute standard\_MarketProduct.marketProductType
- 520 3. Dependencies on associated bids in previous MTU periods due to conditional and/or technical linking, represented by linkedBidIdentification and Linked\_BidTimeSeries

521  
522  
523

If a bid is subject to both conditional and technical linking and those links would yield different outcomes, the most restrictive result shall apply.

524 **5.3.4 Dependencies governing the Confirmation\_MarketDocument**

525 The common platform will respond with a confirmation document whenever a TSO submits an updated bid document after T-12. The confirmation  
526 document will for each bid indicate whether the update was successful or not; bid update will fail if the AOF has already activated the bid. If the AOF  
527 is running at the moment the updated bid document arrives, the common platform will send the confirmation document once the AOF has finished.

528 **Table 5 – confirmation market document dependency table**

<b>Confirmation_MarketDocument</b>		<b>Use</b>	<b>XSD requirements</b>
mRID	Unique identification of the Confirmation Document	Used	Mandatory
Type	A18 = Confirmation report	Used	Mandatory
createdDateTime	Date and time of confirmation document creation	Used	Mandatory
sender_MarketParticipant.mRID	EIC of the common platform operator: 10X1001C—00009H	Used	Mandatory
sender_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Mandatory
receiver_MarketParticipant.mRID	EIC of the Transmission System Operator	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A04 = System operator	Used	Mandatory
schedule_Period.timeInterval	The MTU period. Always 15 minutes length.	Used	Mandatory
confirmed_MarketDocument.mRID	mRID of updated bid document	Used	Conditional
confirmed_MarketDocument.revisionNumber	Version number of updated bid document	Used	Conditional
domain.mRID	EIC of the region	Used	Mandatory
Process.processType	A47 = Manual frequency restoration reserve	Used	Conditional

529

<b>Reason (associated with header)</b>		<b>Use</b>	<b>XSD requirements</b>
code	B53 = MOL merging successful	Used	Mandatory
text		Not used	Conditional

530

Confirmed_TimeSeries		Use	XSD Requirements
mRID	Identification of the bid as indicated by the mRID of the BidTimeSeries in the ReserveBid_MarketDocument received from the TSO.	Used	Mandatory
version	Always "1"	Used	Mandatory
businessType	B74 = Offer	Used	Mandatory
product	8716867000016 = Active power	Used	Mandatory
objectAggregation	A04 = Agreement identification	Used	Mandatory
measurement_Unit.name	MAW = Megawatts	Used	Mandatory

531

Reason (associated with Confirmed_TimeSeries)		Use	XSD requirements
code	A86 = confirmation with adjustment (when bid update successfully reflected in CMOL) B16 = tender unavailable in MOL list (when bid update failed because bid already activated) A85 = confirmation without adjustment (when bid did not contain any modifications)	Used	Mandatory
text		Not used	Conditional

532

533 Exactly one instance of Reason class is always associated with the header and each Confirmed\_TimeSeries, respectively.

534 **5.3.5 Dependencies governing the Capacity\_MarketDocument**

535 The capacity market document is used to provide the cross-border capacity limits, net position limits and technical profiles during exactly one MTU  
536 period. For a given border values must be provided for both directions in the same file. It is also used by the common mFRR platform to inform the  
537 TSOs of any remaining cross-border capacity.

538 For a given MTU period, the remaining cross-border capacity resulting from scheduled and direct activations, respectively, shall be sent in separate  
539 documents. The remaining cross-border capacity from subsequent direct activations for the same MTU period will be sent as higher versions of the  
540 document that contained the remaining capacity from the first direct activation.

541 Data consumer has a choice between receiving the remaining cross-border capacity with or without ramping. When the document with the remaining  
542 cross-border capacity describes the ramping, it may partially cover up to three MTU periods for scheduled activations and for direct activations partially  
543 up to four MTU periods. When the document does not describe ramping, it will cover exactly one MTU period for scheduled activation and two MTU  
544 periods for direct activations.

545 The Period.timeInterval shall not bridge the change of CET/CEST day - separate documents will be output as necessary.

546 The capacity document will also be used to submit cross-border capacity limits, net position limits and technical profiles to the transparency platform.

547 **Table 6 – capacity market document dependency table**

		Use	XSD requirements
<b>Capacity_MarketDocument</b>			
mRID	Unique identification of the Capacity Document	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Mandatory
type	A31 = Agreed capacity (used when submitting cross-border capacity limits, net position limits or technical profiles to common platform) A26 = Capacity document (used to transmit remaining cross-border capacity from the common platform to the TSOs)	Used	Mandatory
process.processType	A47 = Manual frequency restoration reserve	Used	Mandatory
sender_MarketParticipant.mRID	EIC of the Transmission System Operator when submitting documents of type = A31 to common platform EIC of the common platform Operator when the DocumentType = A26 and when common platform submits documents of type = A31 to central transparency platform: 10X1001C--00009H EIC of the CMM when submitting documents of type = A31 to common platform	Used	Mandatory
sender_MarketParticipant.marketRole.type	A04 = System operator when submitting documents of type = A31 to common platform	Used	Mandatory

		Use	XSD requirements
	A35 = MOL responsible when type = A26 and when common platform submits documents of type = A31 to central transparency platform A36 = Capacity Coordinator when CMM submits documents of type = A31 to common platform		
receiver_MarketParticipant.mRID	EIC of the common platform Operator when submitting documents of type = A31 to common platform: 10X1001C—00009H EIC of the Transmission System Operator when type = A26 EIC of the central transparency platform when common platform reports documents of type = A31: 10X1001A1001A450	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A35 = MOL responsible Operator when type = A31 A04 = System operator when type = A26 A32 = Market information aggregator when common platform reports documents of type A31 to central transparency platform	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Mandatory
period.timeInterval	The MTU period described (15 minutes) when type = A31. From beginning of ramp up until end of ramp down when type = A26 and ramps included. The MTU period(s) described (15 minutes for SA and 30 minutes for DA) when type = A26 and ramps excluded	Used	Mandatory
domain.mRID	EIC of the region	Used	Mandatory

<b>TimeSeries</b>			
mRID	The unique identification of the time series within the document	Used	Mandatory
businessType	A26 = ATC	Used	Mandatory
product	8716867000016 = active power	Used	Mandatory
in_Domain.mRID	EIC identification of the area where the power is being put. Shall contain the TSO's area when submitting net position limits on import. Shall contain the region when submitting net position limits on export.	Used	Mandatory
out_Domain.mRID	EIC identification of the area where the power is coming from. Shall contain the region when submitting net position limits on import. Shall contain the TSO's area when submitting net position limits on export.	Used	Mandatory
measurement_Unit.name	MAW = Megawatts	Used	Mandatory
auction.mRID	The identification of an auction specification	Not used	Conditional
auction.category	The category under which capacity is classified	Not used	Conditional

		Use	XSD requirements
curveType	A01 = Sequential fixed size block, when type = A31 A03 = variable sized block when type = A26 and ramps excluded A05 = non-overlapping breakpoint, when type = A26 and ramps included  Defaults to A01 if attribute excluded when submitting document to mFRR platform.	May be used	Conditional
connectingLine_RegisteredResource.mRID	The identification of a set of lines that connect two areas together. This is only used when specific tie lines have to be identified.	May be used	Conditional
requesting_MarketParticipant.mRID	EIC of party requesting an adjustment to the limit	May be used when type = A31	Conditional
requesting_MarketParticipant.marketRole.type	role of party requesting an adjustment to the limit: A04 = System Operator	Used if requesting market participant populated	Conditional

**Note:** CIM EG recommends that curveType shall always be populated and therefore the use of the attribute will become mandatory in future release.

<b>Period</b>			
timeInterval	A time interval of the same length as the period.timeInterval in header	Used	Mandatory
resolution	PT15M when type = A31 PT1M when type = A26	Used	Mandatory

<b>Point</b>			
position	Position within the time interval	Used	Mandatory
quantity	When type = A31: Quantity of limit with 1 MW precision. Negative values are not permitted. When type = A26: Quantity of remaining capacity with 0.1 MW precision.	used	Mandatory

<b>Reason (associated with time series)</b>			
	Exactly one instance of Reason class shall be included when type = A31 and requesting_MarketParticipant has been populated	May be used	<b>Conditional</b>
code	B47 = Operational security constraints	Used	
text	May be populated to provide additional explanation or justification in free text format	May be used	

549 **5.3.6 Dependencies governing the HVDCLink\_marketDocument**

550 The HVDC link market document is used by the TSO to provide all the HVDC constraints and schedules to the common platform. This document may  
551 optionally also be used by TSOs to provide constraints on AC links. For a given interconnector, schedules must be provided for both directions within  
552 the same document.

553 **Table 7 – HVDC link market document dependency table**

		Constraint	Schedule	XSD requirements
<b>HVDCLink_MarketDocument</b>				
mRID	Unique identification of the HVDC link market document	Used	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Used	Mandatory
type	The coded type of a document. The document type describes the principal characteristic of the document.	A99 = HVDC link constraints	B02 HVDC schedule	Mandatory
process.processType	A47 = Manual frequency restoration reserve	Used	Used	Mandatory
sender_MarketParticipant.mRID	EIC of the Transmission System Operator	Used	Used	Mandatory
sender_MarketParticipant.marketRole.type	A04 = System operator	Used	Used	Mandatory
receiver_MarketParticipant.mRID	EIC of the common platform Operator: 10X1001C--00009H	Used	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Used	Mandatory
schedule_Period.timeInterval	The MTU period covered by the schedule (15 minutes)	Used	Used	Conditional
docStatus	A02 = Final A09 = Cancelled	Used	Used	Mandatory
domain.mRID	EIC of the region	Used	Used	Mandatory

554

TimeSeries		Constraint	Schedule	
mRID	The unique identification of the time series within the document	Used	Used	Mandatory
businessType	B30 = HVDC settings	Used	Used	Mandatory
product	8716867000016 = active power	Used	Used	Mandatory
objectAggregation	A09 = DC link	Used	Used	Mandatory
connectingLine_RegisteredResource.mRID	The identification of the HVDC link or group of HVDC links.	May be used	May be used	Conditional
hVDCMode_AttributeInstanceComponent.attribute	A01 = HVDC set point schedule	Used	Used	Conditional
out_Domain.mRID	EIC identification of the area where the product is being extracted	Used	Used	Conditional
in_Domain.mRID	EIC identification of the area where the product is being delivered	Used	Used	Conditional
measurement_Unit.name	MAW= Megawatts	Used	Used	Mandatory
curveType	A01 = Sequential fixed size block Defaults to A01 if attribute excluded when submitting document to mFRR platform.	May be used	May be used	Conditional
minimumExchange_Quantity.quantity	The minimum value of a power exchange range between the In_Domain and the Out_Domain of the timeseries.	Not used	Not used	Conditional
maximumExchange_Quantity.quantity	The maximum value of a power exchange range between the In_Domain and the Out_Domain of the timeseries.	Not used	Not used	Conditional
start_DateAndOrTime		Not used	Not used	Conditional
end_DateAndOrTime		Not used	Not used	Conditional
Series_Period				
timeInterval	A time interval of the same length as the schedule_Period.timeInterval (15 minutes)	Used	Used	Mandatory
resolution	PT15M	Used	Used	Mandatory

Point		Constraint	Schedule	
position	Position within the time interval	Used	Used	Mandatory
quantity	The value of the scheduled product. One of the directions must equal zero (net schedule). Precision is 1 MW.	Not used	Used	Conditional
minimum_Quantity.quantity	The minimum value of power exchange on the HVDC line (or AC link) for a scheduled point. Precision is 1 MW. Shall be zero if constraints are provided in both directions for a given position.	Used	Not used	Conditional
maximum_Quantity.quantity	The maximum value of power exchange on the HVDC line (or AC link) for a scheduled point. Precision is 1 MW.	Used	Not used	Conditional
optimum_Quantity.quantity	The value of the optimum power exchange on the HVDC line for a scheduled point.	Not used	Not used	Conditional

556 **Note:** CIM EG recommends that curveType shall always be populated and therefore the use of the attribute will become mandatory in future release.

557

558 **5.3.7 Dependencies governing the MeritOrderList\_MarketDocument**

559 The merit order list market document is used by the common platform to provide to TSOs all the information related to the bids that have been accepted  
560 as well the demands that have been satisfied. The merit order list document is sent after each execution of the AOF to all TSOs connected to the  
561 platform. Document will contain only bids and demands submitted by the given TSO. Activated and partially activated bids will be sent in one file.  
562 Rejected bids will be sent in a second file.

563 **Table 8 – merit order list market document dependency table**

		BIDS	DEMANDS	XSD requirements
<b>MeritOrderList_MarketDocument</b>				
mRID	Unique identification of the MOL Document	Used	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Used	Mandatory
type	B23 = Offers to be activated (activated bids and all demands) A43 = MOL document (rejected bids)	B23 A43	B23	Mandatory
process.processType	A60 = mFRR with scheduled activation A61 = mFRR with direct activation	Used	Used	Conditional
sender_MarketParticipant.mRID	EIC of the common Operator: 10X1001C--00009H	Used	Used	Mandatory
sender_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Used	Mandatory
receiver_MarketParticipant.mRID	EIC of the Transmission System Operator	Used	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A04 = System operator	Used	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Used	Mandatory
period.timeInterval	The duration of the activation period: 15 minutes for scheduled activation and up to 30 minutes for direct activation)	Used	Used	Mandatory
domain.mRID	EIC of the region	Used	Used	Conditional

564

BidTimeSeries				
marketAgreement.mRID	Identification of the bid or the demand as indicated by the mRID of the BidTimeSeries in the ReserveBid_MarketDocument received from the TSO.	Used	Used	Mandatory
marketAgreement_createdDateTime	The timestamp of when the bid was received	Not used	Not used	Conditional
priority	A sequential number indicating the priority of the bid in relation to other bids.	Not used	Not used	Conditional
resourceProvider_MarketParticipant.mRID	The balance service provider (BSP) identification.	May be used	Not used	Conditional
registeredResource.mRID	The identification of the resource used to provide the reserves.	May be used	Not used	Conditional
acquiring_Domain.mRID	For bids it corresponds to the EIC identification of the region. For demands it corresponds to the EIC identification of the receiving TSO's area.	region	Receiving TSO's area	Mandatory
connecting_Domain.mRID	for bids it corresponds to the EIC identification of the receiving TSO's scheduling area providing the reserves. for demands it corresponds to the EIC identification of the region providing the reserves	Receiving TSO's area	region	Mandatory
auction.mRID	Identification of auction as defined in the reserve bid document. Constant value of "AUCTION-mFRR".	Used	Used	Mandatory
businessType	B74 = Offer B75 = Need	B74 = Offer	B75 = Need	Mandatory
bid_Period.timeInterval	The activation period: Duration is fixed to 15 minutes for scheduled activation and from 15 up to 30 minutes for direct activation.	Used	Used	Mandatory
quantity_Measure_Unit.name	MAW = Megawatts	Used	Used	Mandatory
currency_Unit.name	EUR = Euro	Used	Used	Conditional
price_Measurement_Unit.name	MWH = Megawatt hours	Used	Used	Conditional
auction.paymentTerms	A01 = Pay as bid A02 = Pay as cleared	Not used	Not used	Conditional
energyPrice_Measurement_Unit.name	MWH = Megawatt hours	Not used	Not used	Conditional

direction	A01 = UP A02 = DOWN Refer to the price payment table for use in relation to price.	Used	Used	Mandatory
minimumActivation_Quantity.quantity	The minimum quantity that can be activated	Not used	Not used	Conditional
stepIncrement_Quantity.quantity	Not used. For demands and divisible bids the output step increment has been harmonised to 1 MW.	Not used	Not used	Conditional
marketObjectStatus.status	A06 = available (the bid has not been selected for activation) A10 = ordered (i.e. common platform has requested that the TSO activates a bid) A11 = unavailable (the bid is no longer available for activation) A33 = not satisfied (i.e. The demand cannot be satisfied by the common platform)	A06 A10 A11	A10 A33	Mandatory

Period				
timeInterval	The activation period. Shall be the same value as in bid_Period.timeInterval	Used	Used	Mandatory
resolution	Equivalent to the length of the bid's activation period. For scheduled activation: PT15M For direct activation: Integer value from PT15M up to PT30M	Used	Used	Mandatory

Point				
position	Position within the time interval. As there shall always be exactly one point within the Period, value shall always be 1.	Used	Used	Mandatory
quantity.quantity	Quantity offered or needed. Precision is 1 MW.	Quantity offered	Quantity needed	Mandatory
price.amount	The price for activating the product. Precision is 0.01.	Used when bid accepted	Used when demand satisfied	Conditional
energy_Price.amount	For bids: The offered price. For elastic demands: The requested price. Precision is 0.01.	Used	Used when elastic demand	Conditional

activated_Quantity.quantity	Quantity activated. Precision is 1 MW.	Quantity to be activated. 0 if bid rejected.	Quantity for which activation has been requested. 0 if demand rejected.	Conditional
-----------------------------	--	--	---	-------------

565

Reason (associated with time series)		Not used	Not used	Conditional
code	B66 = Demand fully netted B67 = Bid activated in same direction	Not used	May be used	Mandatory
text		Not used	Not used	Conditional

566

Note: One or two instances of Reason may optionally be populated to indicate that the demand was fully netted and/or a bid was activated in the same direction as the demand.

567

568 **5.3.8 Price payment table**

569 Aligning with EB GL art. 47, Table 9 clarifies whether TSO or Balancing Service Provider (BSP) should pay the price indicated.

570 **Table 9 – price payment table**

BIDS					
acquiring_Domain.mRID	Domain where the reserve will be used	region	region	region	region
connecting_Domain.mRID	Domain providing the reserve	TSO area	TSO area	TSO area	TSO area
flowDirection.direction	Direction of the flow	UP	UP	DOWN	DOWN
price.amount	Price of the energy	>0	<0	>0	<0
Which party pays		TSO	BSP	BSP	TSO

571

572 **5.3.9 Dependencies governing the Schedule\_MarketDocument**

573 The schedule document is used by the common platform to provide all the cross border information related to the nominations that have been assigned.  
574 It is also used to provide the TSO with the net position of its area(s).

575 For a given MTU period, the XB flows and net positions resulting from scheduled and direct activations, respectively, shall be sent in separate documents.  
576

577 The resulting XB flows from the optimization for scheduled activation in MTU1 will be aggregated on top of the resulting flows from the direct activations during MTU0.  
578

579 The resulting net positions from the optimization for scheduled activation in MTU1 will be aggregated on top of the net positions from the direct activations during MTU0.  
580

581 The resulting XB flows from an optimization for direct activation in MTU0 will be aggregated on top of the resulting flows from the scheduled activation for MTU0 and any earlier optimizations for direct activations in MTU0 or MTU-1. The resulting flows from subsequent direct activations for the same MTU period will be sent as higher versions of the same document.  
582  
583

584 The resulting net positions from an optimization for direct activation in MTU0 will be aggregated on top of the resulting net positions from the scheduled activation for MTU0 and any earlier optimizations for direct activations in MTU0 or MTU-1. The resulting net positions from subsequent direct activations for the same MTU period will be sent as higher versions of the same document.  
585  
586

587 Data consumer has a choice between receiving the resulting cross-border flows and net positions with or without ramping. When the documents with  
588 the resulting cross-border flows and net positions sent to TSOs describe the ramping, they may partially cover up to three MTU periods for scheduled  
589 activations and for direct activations partially up to four MTU periods. When the documents do not describe ramping, they will cover exactly one MTU  
590 period for scheduled activation and two MTU periods for direct activations.

591 The schedule\_Time\_Period.timeInterval shall not bridge the change of CET/CEST day. Separate documents will be output as necessary.

592 The schedule document is also used to transmit net positions once per complete CET/CEST day to the SA CE monitors for all scheduling areas within  
593 the SA CE, with single ramped values aggregating both scheduled and direct activations but separated for flows on AC and DC links, respectively.

594 **Table 10 – schedule market dependency table**

		Use	XSD requirements
<b>Schedule_MarketDocument</b>			
mRID	Unique identification of the Schedule Document	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Mandatory
type	A30 = Cross border schedule (for cross-border flows) B17 = Aggregated netted external TSO schedule document (for net positions) A49 = Daily settlement document (for daily net positions to SA CE monitors)	Used	Mandatory
process.processType	A47 = Manual frequency restoration reserve	Used	Mandatory
process.ClassificationType	A01 = Detail type	Used	Mandatory
sender_MarketParticipant.mRID	EIC of the common platform Operator: 10X1001C--00009H	Used	Mandatory
sender_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Mandatory
receiver_MarketParticipant.mRID	EIC of the Transmission System Operator EIC of the CMM	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A04 = System operator A16 = coordination center operator A36 = Capacity Coordinator	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Mandatory
schedule_Time_Period.timeInterval	From start of ramp up until end of ramp down when ramps included The MTU period(s) described (15 minutes for SA and 30 minutes for DA) when ramps excluded CET/CEST day when type=A49	Used	Mandatory

domain.mRID	EIC of the region	Used	Mandatory
subject_MarketParticipant.mRID	EIC of the receiving party	Used	Mandatory
subject_MarketParticipant.marketRole.type	A04 = System Operator A16 = coordination center operator A36 = Capacity Coordinator	Used	Mandatory
matching_Time_Period.timeInterval	Matching period for the schedule document	Not used	Conditional

595

<b>TimeSeries</b>			
mRID	The unique identification of the time series within the document	Used	Mandatory
version	The version of the time series. It must always be the same as the version of the document	Used	Mandatory
businessType	A45=Scheduled activated reserves B09 = Net position	Used	Mandatory
product	8716867000016 = active power	Used	Mandatory
objectAggregation	A01 = Area Only when type = A49, the following values are applicable: A09 = DC link A10 = AC link	Used	Mandatory
in_Domain.mRID	EIC identification of the area where the power is being put	Used	Conditional
out_Domain.mRID	EIC identification of the area where the power is coming from	Used	Conditional
marketEvaluationPoint.mRID	Identification of a resource	Not used	Conditional
in_MarketParticipant.mRID	identification of a market participant putting the power into the area	May be used when type=B17	Conditional
out_MarketParticipant.mRID	Identification of a market participant that is taking the power from the area	May be used when type=B17	Conditional
marketAgreement.type	Identification of the type of agreement	Not used	Conditional
marketAgreement.mRID	Identification of the reserve contract	Not used	Conditional
connectingLine_RegisteredResource.mRID	Provided in case there are multiple interconnectors	May be used when type=A30	Conditional
measurement_Unit.name	MAW = Megawatts	Used	Mandatory
curveType	A03 = variable sized block when ramps excluded A05 = non-overlapping breakpoint when ramps included	Used	Mandatory

596

Series_Period			
timeInterval	A time interval within the schedule_Time_Period.timeInterval	Used	Mandatory
resolution	PT1M	Used	Mandatory

Point			
position	Position within the time interval	Used	Mandatory
quantity	Quantity scheduled	Used	Mandatory

Reason (associated with time series and point)		Not used	Conditional

597 Notes:

- 598 1. When Business type is B09 = Net position and TSO is exporting, the in\_Domain shall be populated with the region and out\_Domain with the  
599 TSO's area. When TSO is importing, in\_Domain shall be populated with the TSO's area and out\_Domain with the region.
- 600 2. Information on In and Out Market Participants will be included for select scheduling areas, due to local market rules for handling of reserve  
601 products: When B09 = Net position out\_MarketParticipant or in\_MarketParticipant will be populated with the party code of the BRP, depending  
602 on whether the TSO is importing or exporting energy. The other attribute will be populated with the party code of the entity operating the  
603 common platform.

604 **5.3.10 Depending governing the Reporting\_MarketDocument**

605 The reporting market document is used by the mFRR platform to submit to the verification  
606 platform the aggregated netted external TSO schedule for the net balancing position between  
607 the mFRR platform and the TSO's scheduling area. It should be noted that this schedule only  
608 describes the outcome of the mFRR process.

609 Values shall be included in the file for the entire CET/CEST day. Values for past MTU periods  
610 shall be repeated and zeroes provided for future MTU periods.

611 **Table 11 – Reporting market document dependency table**

		Used	XSD Requirements
<b>Reporting_MarketDocument</b>			
mRID	Unique identification of the reporting market Document	Used	Mandatory
revisionNumber	Initial transmission shall equal "1"	Used	Mandatory
type	B17 = Aggregated netted external TSO schedule document	Used	Mandatory
process.processType	A18 = Total intraday	Used	Mandatory
sender_MarketParticipant.mRID	EIC of the common platform Operator: 10X1001C--00009H	Used	Mandatory
sender_MarketParticipant.marketRole.type	A35 = MOL responsible	Used	Mandatory
receiver_MarketParticipant.mRID	10V000000000009D V-code of the verification platform	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A32 = Market information aggregator	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Mandatory
time_Period.timeInterval	The period covered by the document. Always corresponds to a complete CET/CEST day.	Used	Mandatory
domain.mRID	mFRR virtual scheduling area	Used	Mandatory
subject_Domain.mRID	mFRR virtual scheduling area	Used	Mandatory

612

<b>TimeSeries</b>			
mRID	Unique identification of the time series.	Used	Mandatory
businessType	B62 = Aggregated netted external TSO schedule	Used	Mandatory
product	8716867000016 = Active Power.	Used	Mandatory
in_Domain.mRID	A scheduling area where the product is being delivered	Used	Mandatory
out_Domain.mRID	A scheduling area where the product is being extracted	Used	Mandatory
connectingLine_RegisteredResource.mRID	Required if DC link or controllable AC link	Not used	Conditional
quantity_Measurement_Unit.name	MAW = Mega watts	Used	Mandatory
curveType	A03 = Variable block	Used	Mandatory
<b>Period</b>			
timeInterval	The start and end time of the period expressed in UTC.	Used	Mandatory
resolution	PT1M = 1 minute	Used	Mandatory
<b>Point</b>			
position	The relative position of the point in relation to the start time interval.	Used	Mandatory
quantity	The quantity representing the net position.	Used	Mandatory

613 Note 1: The in\_Domain or the out\_Domain must identify the region, also referred to as the  
614 virtual scheduling area. The other domain shall be equivalent to a TSO's scheduling area.

615 Note 2: There is a time series for both directions, one of the directions must equal zero.

616 Note 3: No references to connecting lines are included since net positions are reported.

617 Note 4: Exceptionally and temporarily, the net position for some TSOs may be reported per  
618 control area.

619 **5.3.11 Dependencies governing the Balancing\_MarketDocument**

620 The balancing market document covers requirements for transmission of the clearing prices  
621 from the common platform to TSOs and the ENTSO-E transparency platform, as well as for  
622 transmitting the settlement prices for direct activations to TSOs. The same document will also  
623 be used for transmitting to the ENTSO-E transparency platform the aggregated balancing  
624 energy bids, the net positions and exchanged volumes per border.

625 Note that due to the design of the optimisation algorithm in the common platform, clearing  
626 prices for Up and Down regulation in scheduled activation will always be equal.

627 Table 12 provides the dependencies for the balancing market document when the common  
628 platform sends the clearing prices to the TSO.

629 Table 13 provides the dependencies for submission of settlement prices to TSO.

630 Table 14 provides the dependencies for the balancing market document when the common  
631 platform sends clearing prices to the ENTSO-E transparency platform as required by TR article  
632 17.1.f.

633 Table 15 provides the dependencies for the balancing market document when the common  
634 platform sends aggregated balancing energy bids, net positions and exchanged volumes to  
635 the ENTSO-E transparency platform as required by EB GL article 12.3.e and mFRR IF article  
636 3.17.

cancelledTS	If the data for a time series has been cancelled this attribute shall be specified with A01 = Yes	Not used	Conditional

650

Series_Period			
timeInterval	A time interval equal to the MTU period (15 minutes)	Used	Mandatory
resolution	PT15M	Used	Mandatory

Point			
position	Position within the time interval	Used	Mandatory
quantity	The offered quantity when business type = A14 and process type = A47 The net position when business type B09 and process type = A60 or A61 The exchanged volume per border when business type = A45 and process type = A60 or A61 Not used for other combinations of business and process types.	May be used	Conditional
secondaryQuantity	The activated quantity	Used when business type = A14	Conditional
unavailable_Quantity.quantity	The unavailable quantity	Used when business type = A14	Conditional
activation_Price.amount	The activation price for the quantity of reserve.	Not used	Conditional
procurement_Price.amount	The procurement price for the quantity of reserve.	Not used	Conditional
min_Price.amount	The minimum price for the reserve	Not used	Conditional
max_Price.amount	The maximum price for the reserve	Not used	Conditional
imbalance_Price.amount	The imbalance price for the quantity of reserve.	Not used	Conditional
imbalance_Price.category	Identification whether the imbalance price is due to excess or insufficient balance.	Not used	Conditional
flowDirection.direction		Not used	Conditional

Financial_Price (associated with Point)		Not used	Conditional
amount		Not used	Mandatory
direction		Not used	Conditional

651 Note 1: When publishing net positions, the acquiring domain will contain the EIC of the region  
652 when area is exporting. The connecting domain will contain the EIC of the region when area  
653 is importing.

654

### 655 5.3.12 Dependencies governing the BidAvailability\_MarketDocument

656 The bid availability market document is used to provide the detailed reasons for changes to  
657 the availability of bids or the offered volumes. Whenever a TSO modifies a bid either before  
658 or after energy bid gate closure at T-12, it must submit the detailed reasons to the common  
659 platform no later than T+40. The common platform will distribute this information to the central  
660 transparency platform no later than T+45.

661 The TSO shall not submit any BidAvailability document when a bid was declared unavailable  
662 by TSO because it was submitted in error, and hence was resubmitted with reason code B18  
663 = Failure.

664 In the unlikely event that the same bid undergoes several changes to its availability at different  
665 points in time, the TSO may transmit to the mFRR platform higher version(s) of the same Bid  
666 Availability Market Document.

667

**Table 16 – bid availability market document dependency table**

		Use	XSD requirements
<b>BidAvailability_MarketDocument</b>			
mRID	Unique identification of the bid availability market document	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Mandatory
type	B45 = bid availability document	Used	Mandatory
process.processType	A47 = Manual frequency restoration reserve	Used	Mandatory
sender_MarketParticipant.mRID	EIC of the transmitting TSO EIC of the common platform operator: 10X1001C--00009H	Used	Mandatory
sender_MarketParticipant.marketRole.type	A04 = System operator A35 = MOL responsible	Used	Mandatory
receiver_MarketParticipant.mRID	EIC of the common platform operator: 10X1001C--00009H EIC of the ENTSO-E transparency platform: 10X1001A1001A450	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A35 = MOL responsible A32 = Market information aggregator	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Mandatory
docStatus	A13 = Withdrawn Only used in case a document has been submitted by mistake	May be used	Conditional
time_Period.timeInterval	The MTU period covered by bid(s) referenced in the document	Used	Mandatory
<b>BidTimeSeries</b>			
mRID	Identification of the bid time series when simple bid. multipartBidIdentification when multipart bid.	Used	Mandatory

	exclusiveBidsIdentification when exclusive bid.		
bidDocument_MarketDocument.mRID	Bid document that contained the bid time series	Used	Mandatory
bidDocument_MarketDocument.revisionNumber	Version number of the bid document	Used	Mandatory
requestingParty_MarketParticipant.mRID	EIC code of Party requesting update of bid. Not populated when Requesting Party is a BSP.	May be used	Conditional
requestingParty_MarketParticipant.name	Populated when Requesting Party is a DSO	May be used	Conditional
requestingParty_MarketParticipant.marketRole.type	A49 = Transmission System Operator A46 = Balancing Service Provider A50 = Distribution System Operator	Used	Mandatory
businessType	C40 = Conditional bid C41 = Thermal limit C42 = Frequency limit C43 = Voltage limit C44 = Current limit C45 = Short-circuit current limits C46 = Dynamic stability limit	Used	Conditional
domain.mRID	EIC code of scheduling area from which bid originates	Used	Mandatory
operationalLimit_Quantity.quantity		Not used	Conditional
limit_Measurement_Unit.name		Not used	Conditional

668

<b>Reason (associated with time series)</b>	<b>See note 1 below.</b>		
code	When business type = C40 the following reason only applies: B16 = Tender unavailable in MOL list  When business type = C42 one of the following reasons apply: B58 = Insufficiency of reserves B59 = Unavailability of reserve providing units  When business type = C41, C43, C44, C45 or C46 one of the following reasons apply: B18 = Failure B46 = Internal congestion B47 = Operational security constraints B60 = Unavailability of automatic protection systems	Used	Mandatory
text	May be populated to provide additional explanation in free text format	May be used	Conditional

669

<b>RegisteredResource (associated with BitTimeSeries)</b>	<b>See note 2 below.</b>		
mRID	EIC code of concerned network element	Used	Mandatory

670 Note 1: Exactly one instance of Reason shall be populated.

671 Note 2: One or several instances of RegisteredResource shall be associated with the  
672 BidTimeSeries when Business Type is Thermal Limit = C41 and  
673 requestingParty\_MarketParticipant.marketRole.type is A49 (Transmission System Operator).  
674 RegisteredResource shall not be populated for any other Business Types.

675

### 676 5.3.13 Dependencies governing the Unavailability\_MarketDocument

677 Up until T+5, TSOs may submit an unavailability document requesting its disconnection or  
678 decoupling.

679 The common platform uses the unavailability document to communicate toward all  
680 participating TSOs the disconnection of a TSO or the decoupling of an area, as well as  
681 unavailability or failure in the common platform. Except for decoupling, the common platform  
682 submits the same information to the central transparency platform. Updates to a  
683 disconnection, decoupling or unavailability will be reported in a higher version of the original  
684 document.

685 Each document will describe a single instance of a disconnection, decoupling, unavailability  
686 or failure. Hence the document shall contain exactly one time series. No Series\_Period shall  
687 be included.

688 **Table 17 – unavailability market document dependency table**

		Use	XSD requirements
<b>Unavailability_MarketDocument</b>			
mRID	Unique identification of the unavailability market document	Used	Mandatory
revisionNumber	Initial transmission should normally equal "1"	Used	Mandatory
type	A53 = Outage publication document	Used	Mandatory
process.processType	A47 = Manual frequency restoration reserve A60 = mFRR with scheduled activation A61 = mFRR with direct activation  Only A47 applicable when TSO transmits document	Used	Mandatory
createdDateTime	Date and time of document creation	Used	Mandatory
sender_MarketParticipant.mRID	EIC of the transmitting TSO EIC of the common platform operator	Used	Mandatory
sender_MarketParticipant.marketRole.type	A04 = System Operator A35 = MOL responsible	Used	Mandatory
receiver_MarketParticipant.mRID	EIC of the common platform operator EIC of the receiving TSO EIC of the ENTSO-E transparency platform: 10X1001A1001A450	Used	Mandatory
receiver_MarketParticipant.marketRole.type	A35 = MOL responsible A04 = System Operator A32 = Market information aggregator	Used	Mandatory
unavailability_Time_Period.timeInterval	The MTU period(s) affected by the unavailability	Used	Mandatory
docStatus	A01 = Intermediate A02 = Final A09 = Cancelled A13 = Withdrawn  A09 is used when a future dated outage, decoupling or disconnection is cancelled. A13 may be used to withdraw erroneously communicated outage  Only A01 and A09 applicable when TSO transmits document	May be used	Conditional

<b>TimeSeries</b>			
mRID	identification of the time series	Used	Mandatory
businessType	C47 = Disconnection C50 = Decoupling A83 = Auction cancellation (used in case no solution found or algorithm failure) A53 = Planned maintenance A54 = Unplanned outage  Only C47 and C50 applicable when TSO transmits document	Used	Mandatory

biddingZone_Domain.mRID	EIC code of disconnected area when businessType = C47 EIC code of decoupled area when businessType = C50 EIC code of region when businessType = A83, A53 or A54	Used	Conditional
in_Domain.mRID		Not used	Conditional
out_Domain.mRID		Not used	Conditional
start_DateAndOrTime.Date	start date of the first affected validity period	Used	Mandatory
start_DateAndOrTime.Time	start time of the first affected validity period	Used	Mandatory
end_DateAndOrTime.Date	start date of the first validity period no longer affected by the unavailability	Used	Mandatory
end_DateAndOrTime.Time	start time of the first validity period no longer affected by the unavailability	Used	Mandatory
quantity_Measure_Unit.name	MAW	Used	Mandatory
curveType	A03	Used	Mandatory
production_RegisteredResource.mRID		Not used	Conditional
production_RegisteredResource.name		Not used	Conditional
production_RegisteredResource.location.name		Not used	Conditional
production_RegisteredResource.pSRType.psrType		Not used	Conditional
production_RegisteredResource.pSRType.powerSystemResources.mRID		Not used	Conditional
production_RegisteredResource.pSRType.powerSystemResources.name		Not used	Conditional
production_RegisteredResource.pSRType.powerSystemResources.nominalP		Not used	Conditional

689

Reason (associated with time series)			
code	B11 = Cooperating area problem (when area decoupled) B13 = Communication status currently inactive (when TSO disconnects) B18 = Failure (in platform) B19 = Foreseen Maintenance B27 = Calculation process failed (when algorithm failed) A99 = Auction cancelled (when no solution found by algorithm)  Only B11 and B13 applicable when TSO transmits document	Used	Mandatory
text	May be populated to provide additional explanation in free text format	May be used	Conditional

690 Series\_Period and consequently Point classes are not used.

691

692 **5.3.14 Dependencies governing the EnergyAccount\_MarketDocument**

693 The energy account document is used by the common platform to provide the invoicing  
694 financial information for the mFRR to the accounting service billing provider. The document is  
695 used as detailed below:

- 696 1. To provide the financial settlement of the net positions;  
697 2. To provide the congestion income;  
698 3. To provide the negative congestion income due to the imposition of constraints on  
699 interconnectors;  
700 4. To provide the rounding error.

701

702 **Table 18 – Energy account market document dependency table (submission of**  
703 **Invoicing and financial data to party responsible for TSO invoicing)**

		Use	XSD requirements
<b>EnergyAccount_MarketDocument</b>			
mRID	Unique identification of the Energy Account market Document	Used	Mandatory
revisionNumber	Initial transmission shall equal "1"	Used	Mandatory
type	A12 = Imbalance report	Used	Mandatory
docStatus	A02 = Final	Used	Mandatory

<b>TimeSeries</b>			
mRID	Unique identification of the time series	Used	Mandatory
businessType	B09 = Net positions B10 = Congestion income B77 = Financial compensation or penalties C56 = Rounding error C48 = Intended energy with positive price C49 = Intended energy with negative price  B09 applicable only for process type A60. C48 and C49 shall be used to describe the net positions for direct activations and are therefore applicable only for process type A61.  B77 used when negative congestion income. Applicable only for process type A60.	Used	Mandatory

product	8716867000016 = Active power	Used	Mandatory
objectAggregation	A01 = Area	Used	Mandatory
area_Domain.mRID	EIC identification of the scheduling area EIC of the control area will be used when businessType is C56 = Rounding error or when congestion income is attributed to a TSO not situated on either end of the interconnector EIC identification of the interconnector may be used when business type B10 = congestion income	Used	Mandatory
marketParticipant.mRID	identification of TSO responsible for the area identification of the organisation responsible for the interconnector may be used when business type B10 = congestion income	Used	Conditional
marketAgreement.mRID	Identification of the reserve contract	Not used	Conditional
measure_Unit.name	MWH = Megawatts hours	Used	Mandatory
currency_Unit.name	EUR = Euro	Used	Conditional
marketEvaluationPoint.mRID	Identification of an accounting point	Not used	Conditional

705

Series_Period			
timeInterval	When process type = A61 and business type C48 or C49: 30 minutes length (corresponding to MTU0 and MTU1) and iterated for all MTU periods within period.timeInterval  In all other cases: A time interval equal to period.timeInterval	Used	Mandatory
resolution	PT15M	Used	Mandatory

Point			
position	Position within the time interval	Used	Mandatory
in_Quantity.quantity	Quantity going into an area	Used	Mandatory
in_Quantity.quality	The quality of the quantity	Not used	Conditional
out_Quantity.quantity	Quantity going out of an area	Used	Mandatory
out_Quantity.quality	The quality of the quantity	Not used	conditional
price.amount	settlement amount. This represents the total financial value for the point in respect to the time series businessType. The value may be negative.	Used	conditional

706 Note: The in quantity and out quantity represent a netted value consequently one of the values  
707 must always be equal to zero.

<b>Reason (associated with Point)</b>		Not used	<b>Conditional</b>
---	--	-------------	--------------------

708

### 709 5.3.15 Financial amount table

710 Table 19 indicates the domain owner that should pay the amount indicated.

711

**Table 19 – financial amount table**

price.amount	Settlement amount	>0	<0
Which party pays		TSO	common platform

712

**713 5.4 Signalling**

714 As indicated in chapters 5.2.8 and 5.2.9, the resulting XB flows and net positions may be  
715 communicated as a real-time signal with intervals of 4 seconds. Depending on configuration  
716 in the mFRR platform, the signals may reflect ramping or not. When reflecting ramping, the  
717 signal at any given second will be linearly interpolated between the two surrounding points in  
718 the corresponding Schedule documents described in chapter 5.3.9, following the gradient.  
719 During ramping, each 4 second value will follow the gradient and not have the same value for  
720 a whole minute.

721 The following protocols shall be supported: IEC 60870-6 (also referred to as TASE.2 or ICCP)  
722 and IEC 60870-5-101/104 (also referred to as IEC 101 and IEC 104).
