Common Information Model Expert Group

EIC: Area codes analysis.
Focus on control blocks

Version 3.0
2 April 2021
• The present analysis has been undertaken in collaboration with the European Electricity TSOs.

• The presentation illustrates Area-codes (Y-Codes) representing control blocks which are currently or in future in use within the European markets.

• The presentation does not display:
  o Y-Codes that are already displayed in the EIC map directly synchronized with CIO tool on ENTSO-E website: it includes Y-Codes representing member state, scheduling areas, control areas, market balance areas, bidding zones, synchronized areas.
  o Y-Codes which are currently used in the ENTSO-E RGCE (regional group continental Europe) settlement and accounting process.

• This list of Y-Codes can be subject to further updates in the future, e.g. depending on changes in area structures at national level.
Definitions

- For the definitions of the different areas, one should refer to the last version of the Harmonised Role Model published on the ENTSOE-E website.
