1	0	2022-09-21	First draft of the document. Approved by SOC.

56

57 **1. Objective**

58 The purpose of this document is to provide the contextual and assembly UML models and the
59 schema of the MeteringData_MarketDocument.

60 The schema of the MeteringData_MarketDocument could be used in various business
61 processes.

62 It is not the purpose of this document to describe all the use cases, sequence diagrams,
63 business processes, etc. for which this schema is to be used.

64 This document shall only be referenced in an implementation guide of a specific business
65 process. The content of the business process implementation guide shall be as follows:

- 66 • Description of the business process;
- 67 • Use case of the business process;
- 68 • Sequence diagrams of the business process;
- 69 • List of the schema (XSD) to be used in the business process and versions of the
70 schema;
- 71 • For each schema, dependency tables providing the necessary information for the
72 generation of the XML instances, i.e. when the optional attributes are to be used, which
73 codes from which ENTSO-E codelist are to be used.

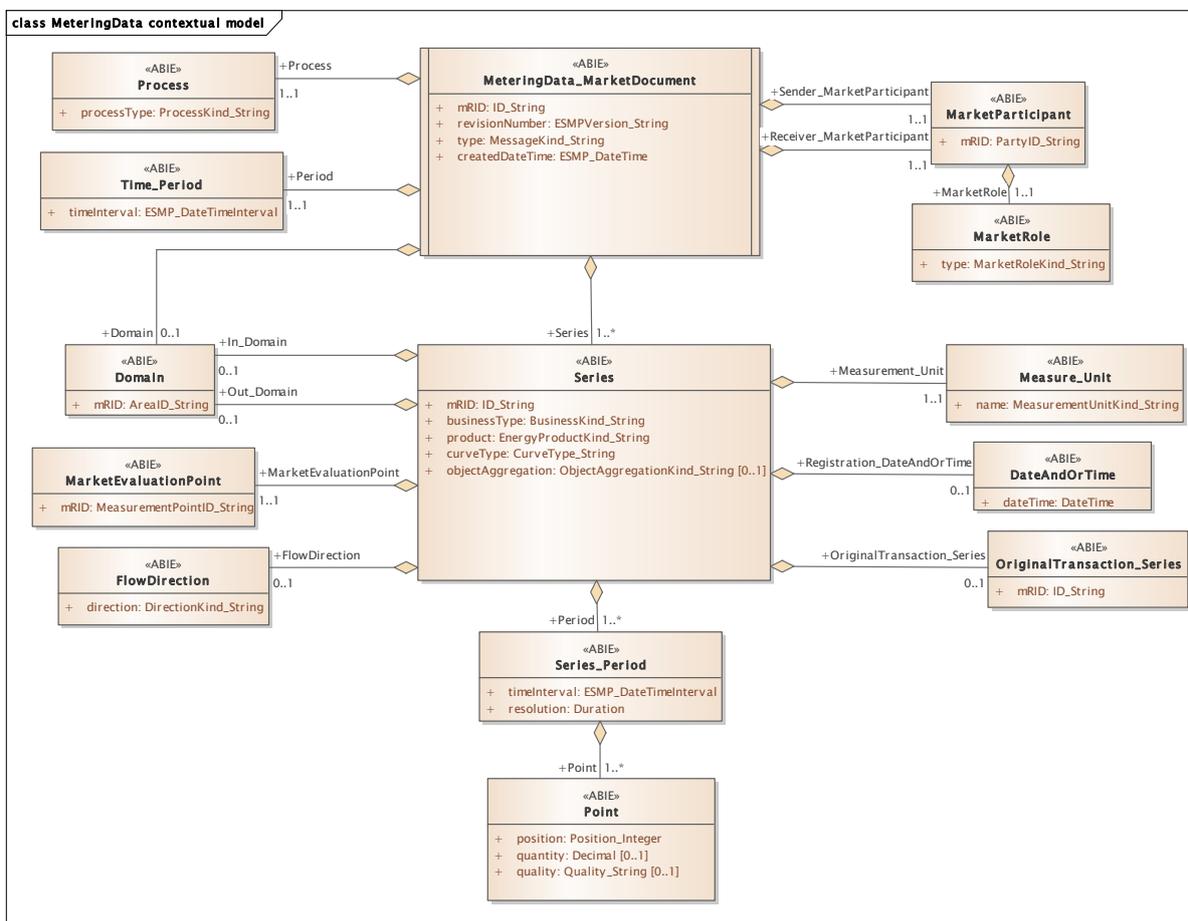

74

75 **2. MeteringData_MarketDocument**

76 **2.1 MeteringData contextual model**

77 **2.1.1 Overview of the model**

78 Figure 1 shows the model.

MeteringData_MarketDocument	TC57CIM::IEC62325::MarketManagement::MarketDocument
Point	TC57CIM::IEC62325::MarketManagement::Point
Series	TC57CIM::IEC62325::MarketManagement::Series
Series_Period	TC57CIM::IEC62325::MarketManagement::Period

98

99 **2.2.3 Detailed MeteringData assembly model**

100 1. MeteringData_MarketDocument root class

101 An electronic document containing the information necessary to satisfy the requirements of a
102 given business process.

103 Table 3 shows all attributes of MeteringData_MarketDocument.

104 **Table 3 - Attributes of MeteringData assembly model::MeteringData_MarketDocument**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	mRID ID_String	The unique identification of the document being exchanged within a business process flow.
1	[1..1]	revisionNumber ESMPVersion_String	The identification of the version that distinguishes one evolution of a document from another.
2	[1..1]	type MessageKind_String	The coded type of a document. The document type describes the principal characteristic of the document.
3	[1..1]	process.processType ProcessKind_String	The identification of the nature of process that the document addresses. --- The Process associated with an electronic document header that is valid for the whole document.
4	[1..1]	createdDateTime ESMP_DateTime	The date and time of the creation of the document.
5	[1..1]	sender_MarketParticipant.mRID PartyID_String	The identification of a party in the energy market. --- Document owner.
6	[1..1]	sender_MarketParticipant.marketRole.type MarketRoleKind_String	The identification of the role played by a market player. --- Document owner.
7	[1..1]	receiver_MarketParticipant.mRID PartyID_String	The identification of a party in the energy market. --- Document recipient.
8	[1..1]	receiver_MarketParticipant.marketRole.type MarketRoleKind_String	The identification of the role played by a market player. --- Document recipient.
9	[1..1]	period.timeInterval ESMP_DateTimeInterval	The start and end date and time for a given interval. --- The time interval that is associated with an electronic document and which is valid for the whole document.

Order	mult.	Attribute name / Attribute type	Description
10	[0..1]	domain.mRID AreaID_String	The unique identification of the domain. In the ESMP context, the "model authority" is defined as an authorized issuing office that provides an agreed identification coding scheme for market participant, domain, measurement point, resources (generator, lines, substations, etc.) identification. Master resource identifier issued by a model authority. The mRID is globally unique within an exchange context. Global uniqueness is easily achieved by using a UUID for the mRID. It is strongly recommended to do this. For CIMXML data files in RDF syntax, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements. --- The Domain associated with an electronic document header.

105

106 Table 4 shows all association ends of MeteringData_MarketDocument with other classes.

107

108

Table 4 - Association ends of MeteringData assembly model::MeteringData_MarketDocument with other classes

Order	mult.	Class name / Role	Description
11	[1..*]	Series Series	The time series that is associated with an electronic document. Association Based On: MeteringData contextual model::Series.Series[1..*] ----- MeteringData contextual model::MeteringData_MarketDocument.[]

109

110 2. Point

111 The identification of the values being addressed within a specific interval of time.

112 Table 5 shows all attributes of Point.

113

Table 5 - Attributes of MeteringData assembly model::Point

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	position Position_Integer	A sequential value representing the relative position within a given time interval.
1	[0..1]	quantity Decimal	The principal quantity identified for a point.
2	[0..1]	quality Quality_String	The quality of the information being provided. This quality may be estimated, not available, as provided, etc.

114

115 3. Series

116 A set of similar physical or conceptual objects defined for the same period or point of time.

117 Table 6 shows all attributes of Series.

118

Table 6 - Attributes of MeteringData assembly model::Series

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	mRID ID_String	A unique identification of the time series. In the ESMP context, the "model authority" is defined as a party (originator of the exchange) that provides a unique identification in the context of a business exchange such as time series identification, bid identification, ... Master resource identifier issued by a model authority. The mRID is globally unique within an exchange context. Global uniqueness is easily achieved by using a UUID for the mRID. It is strongly recommended to do this. For CIMXML data files in RDF syntax, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements.
1	[1..1]	businessType BusinessKind_String	The identification of the nature of the time series.
2	[1..1]	product EnergyProductKind_String	The identification of the nature of an energy product such as power, energy, reactive power, etc.
3	[1..1]	curveType CurveType_String	The identification of the coded representation of the type of curve being described.
4	[1..1]	marketEvaluationPoint.mRID MeasurementPointID_String	A unique identification of the measurement point. In the ESMP context, the "model authority" is defined as an authorized issuing office that provides an agreed identification coding scheme for market participant, domain, measurement point, resources (generator, lines, substations, etc.) identification. Master resource identifier issued by a model authority. The mRID is globally unique within an exchange context. Global uniqueness is easily achieved by using a UUID for the mRID. It is strongly recommended to do this. For CIMXML data files in RDF syntax, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements. --- The identification of a measurement point associated with a TimeSeries.
5	[1..1]	measurement_Unit.name MeasurementUnitKind_String	The identification of the formal code for a measurement unit (UN/ECE Recommendation 20). --- The unit of measure associated with the quantities in a TimeSeries.
6	[0..1]	in_Domain.mRID AreaID_String	The unique identification of the domain. In the ESMP context, the "model authority" is defined as an authorized issuing office that provides an agreed identification coding scheme for market participant, domain, measurement point, resources (generator, lines, substations, etc.) identification. Master resource identifier issued by a model authority. The mRID is globally unique within an exchange context. Global uniqueness is easily achieved by using a UUID for the mRID. It is strongly recommended to do this. For CIMXML data files in RDF syntax, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements. --- The domain associated with a TimeSeries.
7	[0..1]	out_Domain.mRID AreaID_String	The unique identification of the domain. In the ESMP context, the "model authority" is defined as an authorized issuing office that provides an agreed identification coding scheme for market participant, domain, measurement point, resources (generator, lines, substations, etc.) identification. Master resource identifier issued by a model authority. The mRID is globally unique within an exchange context. Global uniqueness is easily achieved by using a UUID for the mRID. It is strongly recommended to do this. For CIMXML data files in RDF syntax, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements. --- The domain associated with a TimeSeries.
8	[0..1]	flowDirection.direction DirectionKind_String	The coded identification of the direction of energy flow. --- The flow direction associated with a TimeSeries.

Order	mult.	Attribute name / Attribute type	Description
9	[0..1]	registration_DateAndOrTime.dateTime DateTime	Date and time as per ISO 8601 YYYY-MM-DDThh:mm:ss.sssZ. --- A date and/or time associated with a TimeSeries.
10	[0..1]	objectAggregation ObjectAggregationKind_String	The identification of the domain that is the common denominator used to aggregate a time series.
11	[0..1]	originalTransaction_Series.mRID ID_String	A unique identification of the time series. In the ESMP context, the "model authority" is defined as a party (originator of the exchange) that provides a unique identification in the context of a business exchange such as time series identification, bid identification, ... Master resource identifier issued by a model authority. The mRID is globally unique within an exchange context. Global uniqueness is easily achieved by using a UUID for the mRID. It is strongly recommended to do this. For CIMXML data files in RDF syntax, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements.

119

120 Table 7 shows all association ends of Series with other classes.

121 **Table 7 - Association ends of MeteringData assembly model::Series with other classes**

Order	mult.	Class name / Role	Description
12	[1..*]	Series_Period Period	The time interval and resolution for a period associated with a TimeSeries. Association Based On: MeteringData contextual model::Series_Period.Period[1..*] ----- MeteringData contextual model::Series.[]

122

123 4. Series_Period

124 The identification of the period of time corresponding to a given time interval and resolution.

125 Table 8 shows all attributes of Series_Period.

126 **Table 8 - Attributes of MeteringData assembly model::Series_Period**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	timeInterval ESMP_DateTimeInterval	The start and end time of the period.
1	[1..1]	resolution Duration	The definition of the number of units of time that compose an individual step within a period.

127

128 Table 9 shows all association ends of Series_Period with other classes.

129 **Table 9 - Association ends of MeteringData assembly model::Series_Period with other classes**

130

Order	mult.	Class name / Role	Description
2	[1..*]	Point Point	The Point information associated with a given Series_Period.within a TimeSeries. Association Based On: MeteringData contextual model::Point.Point[1..*] ----- MeteringData contextual model::Series_Period.[]

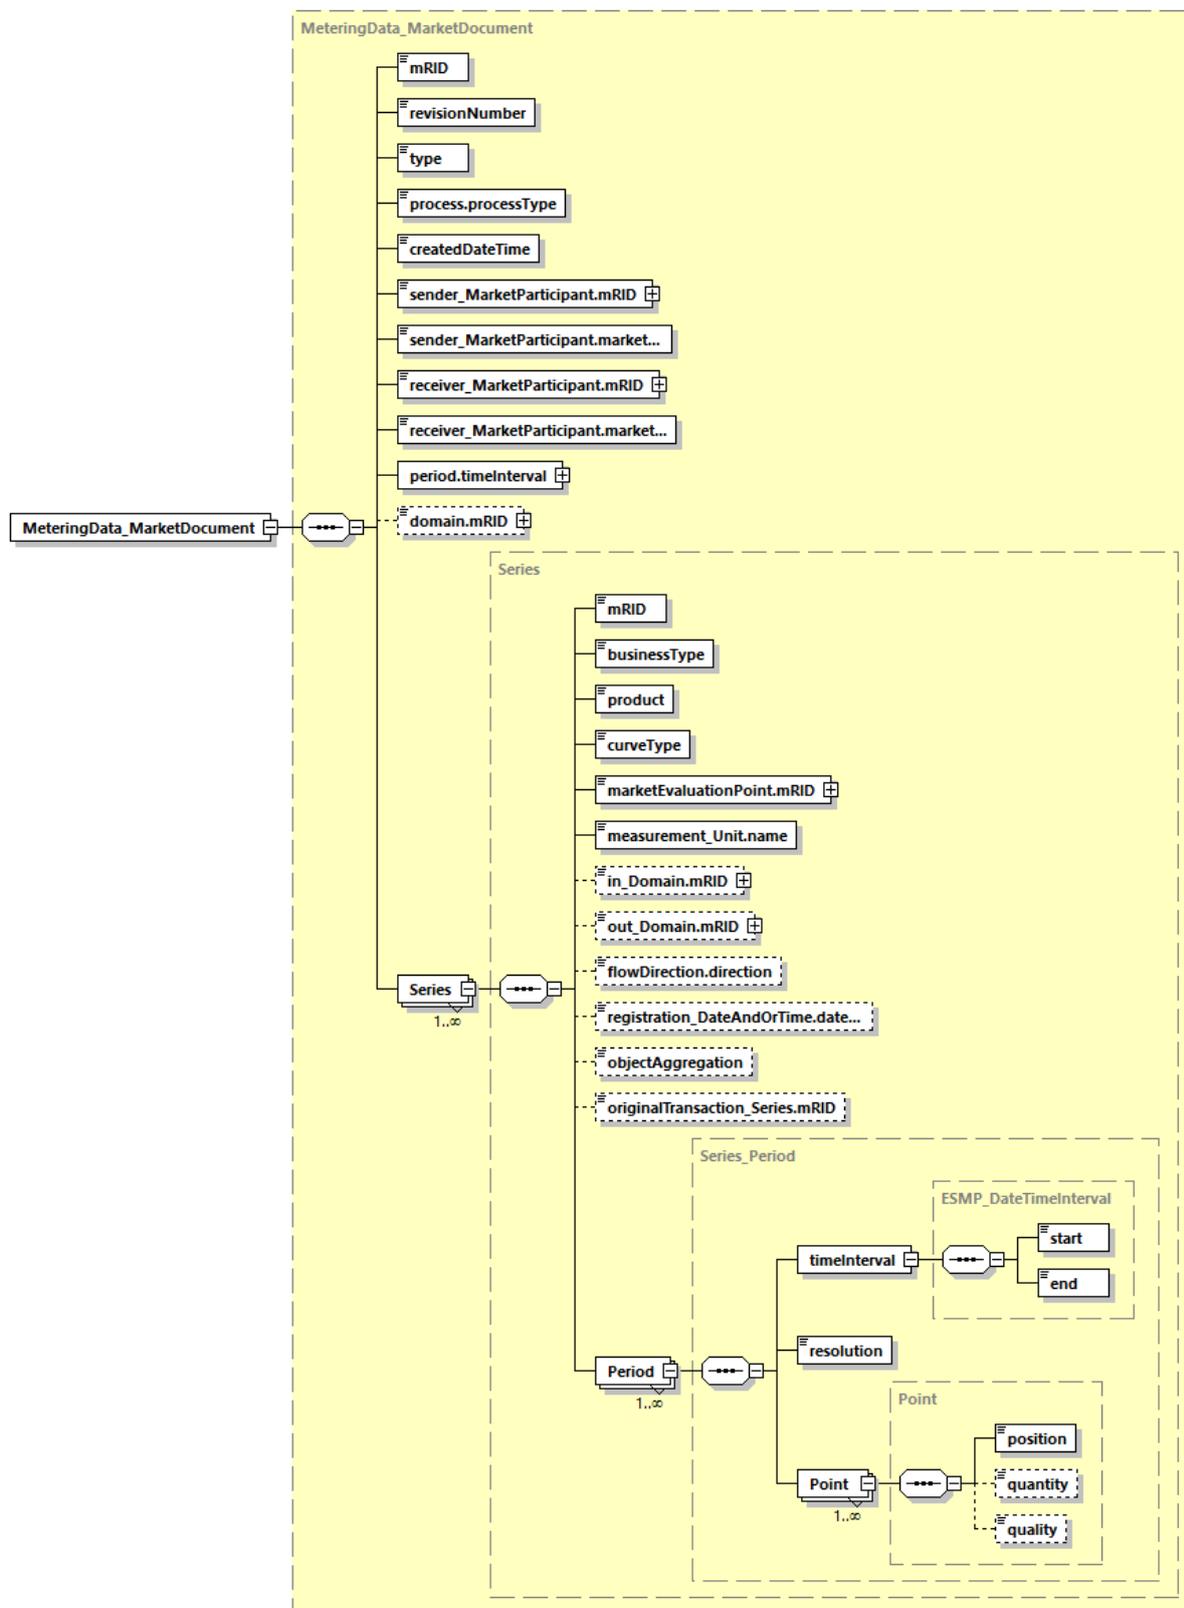

131

132 2.2.4 Datatypes

133 The list of datatypes used for the MeteringData assembly model is as follows:

- 134 • ESMP_DateTimeInterval compound
- 135 • ArealID_String datatype, codelist CodingSchemeTypeList
- 136 • BusinessKind_String datatype, codelist BusinessTypeList
- 137 • CurveType_String datatype, codelist CurveTypeList
- 138 • DirectionKind_String datatype, codelist DirectionTypeList
- 139 • EnergyProductKind_String datatype, codelist EnergyProductTypeList
- 140 • ESMP_DateTime datatype
- 141 • ESMPVersion_String datatype
- 142 • ID_String datatype
- 143 • MarketRoleKind_String datatype, codelist RoleTypeList
- 144 • MeasurementPointID_String datatype, codelist CodingSchemeTypeList
- 145 • MeasurementUnitKind_String datatype, codelist UnitOfMeasureTypeList
- 146 • MessageKind_String datatype, codelist MessageTypeList
- 147 • ObjectAggregationKind_String datatype, codelist ObjectAggregationTypeList
- 148 • PartyID_String datatype, codelist CodingSchemeTypeList
- 149 • Position_Integer datatype
- 150 • ProcessKind_String datatype, codelist ProcessTypeList
- 151 • Quality_String datatype, codelist QualityTypeList
- 152 • YMDHM_DateTime datatype
- 153
