

MRC_OTH_02: Internal and External Communications

Version	Public version
First Trading Day	01/09/2020
Status	<input type="checkbox"/> Draft <input checked="" type="checkbox"/> Final

Remarks

As a general principle, all the Internal and External Communication messages are originally sent by the PCR Coordinator to all the NEMOs.

The regional messages are provided here as templates that can be adapted in the local/regional procedures in order to ensure harmonization throughout the entire MRC area.

Messages displayed in blue boxes are joint PCR messages and are included in this procedure for information purposes. MRC NEMOs may adapt their content according to local/regional procedures before forwarding them to the corresponding TSOs, other stakeholders and, if applicable, to their Market Participants.

	UMM_03: One or more interconnectors decoupled	23

UMM_03a: SI-HR interconnector decoupled for CCP default reasons 25

1. Introduction

This procedure aims at describing the principles, the content and the parties involved in the joint MRC messages that need to be sent when the Market Coupling Results publication is delayed or during some particular market situations or technical incidents.

Everywhere in this document where “TSOs” is written, “TSOs and/or any party entitled by the TSOs” is meant.

Everywhere in this document where “Partial Decoupling” is written in the PCR messages, “Partial Coupling” is meant from the MRC point of view.

All the timings included in this procedure are expressed as CET timings.

1.1. Governed / Regulated by

- Day-Ahead Operations Agreement (DAOA)

1.2. Tools and Communication protocols

1.3. Associated procedures

- PCR_OPE_04: Internal and External Communications
- MRC_FAL_01: Incident Management
- MRC_SPE_01: Impact of Second Auctions
- MRC_SPE_02: Impact of price limits in Nordic-Baltic reached
- MRC_FAL_02: Full Decoupling
- MRC_FAL_03: Partial Coupling

2. Procedure

2.1. PCR Communications

2.1.1. Communication principles

Formal written communication common to MRC is based on the PCR procedure *PCR_OPE_04: Internal and External Communications*.

Therefore, the common content of these official messages is part of the PCR Procedure, while the specific details that can be added by the NEMOs are part of the local procedures.

Official communications are initiated by the PCR Coordinator and may be adapted and forwarded by the NEMOs according to local procedures.

Formal written communication consists of two general types of email messages, as described below:

➤ **“Internal Communication messages” (InC):**

Internal messages define the communication flow from the PCR Coordinator via the NEMOs towards the corresponding TSOs and other relevant stakeholders that have been duly appointed by the MRC Parties.

These messages are for internal use only and shall not be forwarded to the Market Participants.

➤ **“External Communication messages” [ExC]:**

External messages define the communication flow from the PCR Coordinator via the MRC NEMOs towards the corresponding TSOs, Market Participants and other relevant stakeholders that have been duly appointed by the MRC Parties.

Before forwarding these messages received from the PCR Coordinator, MRC NEMOs may adapt them according to their local procedures.

Important remark:

In order to communicate the Risk of Partial Coupling for CZC-related reasons and the declaration of the Partial Coupling for CZC-related reasons (PC Case 1), the NEMOs will refer to local procedures and use local templates.

PCR messages do not cover the above-mentioned situations because the Partial Coupling for CZC-related reasons exists only at the MRC level and not at the PCR level.

2.1.2. Distribution list

NEMOs will forward the external and internal communication messages according to the local distribution lists and procedures.

2.1.3. PCR Messages overview

The following tables provide a list of all the internal and external messages that will be forwarded by the NEMOs during a Market Coupling incident as well as the times they are expected to be sent. The forwarding of the messages from the PCR Coordinator to the NEMOs and subsequently from the NEMOs to the TSOs and Market Participants will be done on a best effort basis, as soon as possible, but not later than 4 minutes after the corresponding Sending Time.

Table 2 - PCR External Communication messages forwarded by NEMOs to their TSOs

Message ID	External message name	Procedures involved
ExC_01	Thresholds reached - Reopening of the order books	MRC_SPE_01 MRC_SPE_03
ExC_02	Delay in Market Coupling Results publication	MRC_FAL_03 MRC_SPE_02
ExC_03a	Risk of Partial Decoupling	MRC_FAL_03
ExC_03b	Further delay of the Market Coupling Session	MRC_FAL_02
ExC_04a	Partial Decoupling - Reopening of the order books	MRC_FAL_03
ExC_04b	Full Decoupling	MRC_FAL_02
ExC_05a	Partial Decoupling known in advance	MRC_FAL_03
ExC_05b	Full Decoupling known in advance	MRC_FAL_02
ExC_06	Delay in Market Coupling Results publication due to curtailment at max price detected in Lithuania, Finland or Sweden	MRC_SPE_02

Note: PC = Partial Coupling, FD = Full Decoupling (as described in the procedures MRC_FAL_02 and MRC_FAL_03)

If any of the following PCR external messages have been sent to the TSOs and to the Market Participants during the Market Coupling Session, NEMOs may send a post-incident explanatory message after [REDACTED] on the same day of the incident: *ExC_03a*, *ExC_03b*, *ExC_04a* and *ExC_04b*.

2.1.5. PCR External Communications

ExC_01: Thresholds reached - Reopening of the order books

In case the prices reach or exceed the predefined thresholds, the IC will decide on the triggering of a Second Auction, according to procedure MRC_SPE_01 and MRC_SPE_03.

As soon as the IC has agreed on a common time to reopen the NEMO order books for 10 minutes, the PCR Coordinator sends the external message *ExC_01* to all the NEMOs.

NEMOs may adapt and forward this message to their Market Participants, TSOs or other relevant stakeholders.

Remark: In case of the message *ExC_01* is sent [REDACTED], the PCR Coordinator will send the *ExC_02* message or, if applicable, in case the [REDACTED] Special Routine was triggered, the *ExC_06* message.

The NEMO that chooses not to reopen the order books may inform the market about the delay in the Market Coupling Results publication by sending the *ExC_02* message, or, if applicable, in case the [REDACTED] Special Routine was triggered, the *ExC_06* message [REDACTED].

Message title:

[ExC_01]: Thresholds reached - Reopening of the order books

Message content:

Due to the exceeding of the predefined price thresholds, a **Second Auction** is triggered.

Consequently, the NEMO order books will be reopened at **HH:MM** for exactly **10 minutes**.

Therefore, the publication of the Market Coupling Results is delayed.

High/low prices are detected for the following bidding areas and hours:

<i>Bidding area</i>	<i>High/ Low</i>	<i>Hours impacted</i>

Disclaimer for entering or modifying orders:

On the bidding area(s) and hour(s) for which thresholds have been reached:

- *In case of high prices: add sale volumes, remove purchase volumes, lower the prices of the sell and/or purchase Orders;*
- *In case of low prices: add purchase volumes, remove sale volumes, increase the prices of the sell and/or purchase Orders.*

Disclaimer: The timings are expressed as CET timings!

Note:

The PCR Coordinator will replace the timing in the text of the communication as follows:

- *HH:MM with time decided in the IC for the reopening of the order books ([REDACTED]).*

NEMOs may add the lower part of the message (the italic section) and fill in the table as follows:

- *Remove the lines for the Bidding Areas that are not impacted;*
- *Add "High" or "Low" for each impacted Bidding Area, depending on the sign of the thresholds reached;*
- *Add the hours where prices exceed the predefined thresholds for each impacted Bidding Area.*

ExC_02: Delay in Market Coupling Results publication

If the positive Global Preliminary Confirmation has not been generated [REDACTED], the PCR Coordinator will send the external message *ExC_02* to the NEMOs in order to communicate the possible delay.

This message shall never be forwarded to the Market Participants [REDACTED] or if the positive Global Preliminary Confirmation is generated [REDACTED].

If the positive Global Preliminary Confirmation is generated [REDACTED], the CWE MO will not forward this message and the Market Coupling Session continues as normal.

If the positive Global Preliminary Confirmation is still not generated [REDACTED], NEMOs may adapt and forward this message to their Market Participants, TSOs or other relevant stakeholders.

Remark: As an exception, the PCR Coordinator will not send the message *ExC_02* if:

- a Second Auction was triggered by the message *ExC_01* before 12:42 or if
- a Partial Decoupling was declared by the message *ExC_04a*.

If the delay is determined by the triggering of the EMCO Nord Pool Special Routine, the Coordinator will send the *ExC_06* message instead of the *ExC_02* message.

Message title:

[ExC_02]: Delay in Market Coupling Results publication

Sending time:

NEMOs will send this message at the Daily Regular Publication Time [REDACTED] if the Market Coupling Results are not published yet.

Message content:

Please be aware that **the publication of the Market Coupling Results is delayed** until further notice.

The Market Coupling Results will be published as soon as they are available.

If needed, another delay message will be sent out

ExC_03a: Risk of Partial Decoupling

In case the IC was launched due to technical problems or there are market issues that could lead to a Partial Coupling, the PCR Coordinator will send the external message *ExC_03a* to all the NEMOs in order to communicate the risk of Partial Coupling.

The interconnectors that might be decoupled have to be agreed during the IC between the concerned NEMOs and TSOs.

The same message will be sent for all the Partial Coupling cases, before the corresponding deadline indicated in Table 2 in the Messages Overview section.

NEMOs may adapt and forward this message to their Market Participants, TSOs or other relevant stakeholders.

Message title:

[ExC_03a]: Risk of Partial Decoupling

Sending time:

In case of risk of PC Case 2, the message ExC_03a will be sent [REDACTED]

In case of risk of PC Case 3, the message ExC_03a will be sent [REDACTED].

Message content:

Please be aware that the **Market Coupling process encounters severe technical issues or extraordinary market situations for the following area(s):**

[REDACTED]

In case of Partial Decoupling, another message will be sent shortly after **HH:MM** to announce the Partial Decoupling.

Disclaimer: The timings are expressed as CET timings!

Note:

Depending on the Partial Coupling case, the PCR Coordinator will replace the timing in the text of the communication HH:MM with one of the following:

[REDACTED]

The PCR Coordinator will remove the area(s) not having a risk of being decoupled.

NEMOs will replace the name of the area in the Coordinator's message by the corresponding interconnectors, according to the table found in Annex1 of this procedure.

ExC_03b: Further delay of the Market Coupling Session

If the final Market Coupling Results are still not published due to technical problems 30 minutes [REDACTED] (the deadline for the Full Decoupling Case 1) or if the issue that might trigger a Full Decoupling in advance has not yet been solved by 30 minutes [REDACTED] (the deadline for the Full Decoupling Case 2), the PCR Coordinator will send the external message *ExC_03b* to the NEMOs in order to communicate the risk of a Full Decoupling.

The same message will be sent for both Full Decoupling cases, before the corresponding deadline indicated in Table 2 in the Messages Overview section.

NEMOs may adapt and forward this message to their Market Participants, TSOs or other relevant stakeholders.

Message content:

Due to technical reasons or market issues, the following area is decoupled from the Market Coupling:

[REDACTED]

As a consequence of the Partial Decoupling, **the NEMO order books for the areas remained coupled will reopen at HH:MM for exactly 10 minutes**, depending on the application of local rules.

Therefore, the publication of the Market Coupling Results is delayed.

For the areas that remain coupled, please follow the market coupling rules as usual.

The decoupled area shall follow its local auction rules.

Disclaimer: The timings are expressed as CET timings.

Note:

The PCR Coordinator will replace the timing in the text of the communication as follows:

- HH:MM with time decided in the Incident Committee for the reopening of the order books ([REDACTED]).
- The PCR Coordinator will remove the area(s) that is/are not decoupled.

The NEMOs will replace the name of the area in the Coordinator's message by the corresponding interconnectors, according to the table found in Annex 1 of this procedure.

If only TGE is decoupled, the PCR Coordinator will need to do the following:

- Remove the following part from the message title: "– Reopening of the order books"
- Remove the following sentences from the message:
 - "As a consequence of the Partial Decoupling, **the NEMO order books for the areas remained coupled will reopen at HH:MM for exactly 10 minutes**, depending on the application of local rules."
 - "Disclaimer: The timings are expressed as CET timings!"

ExC_04b: Full Decoupling

If the final Market Coupling Results are still not published [REDACTED] (the Full Decoupling Deadline of Case FD1), the IC will declare Full Decoupling and the PCR Coordinator will send the external message ExC_04b to the NEMOs in order to communicate the Full Decoupling.

NEMOs may adapt and forward this message to their members, TSOs or other stakeholders.

Message title:

[ExC_04b]: Full Decoupling

Sending time:

The PCR Coordinator will send and NEMOs will forward this message [REDACTED] (Full Decoupling Deadline Case FD1).

Message content:

Due to technical reasons or market issues, the whole price coupled area is fully decoupled.

Please follow the local auction rules of each NEMO.

ExC_05a: Partial Decoupling known in advance

In order to communicate consistently to the regional stakeholders (NRAs, TSOs, and Market Participants) and on a common press release regarding the Partial Coupling, all the NEMOs need to agree beforehand on the Terms of Reference that should be adhered to.

As soon as the IC declares the Partial Coupling known in advance, the PCR Coordinator will send external message ExC_05a to the NEMOs.

This message may be forwarded by the NEMOs to their members, TSOs or other stakeholders.

Message title:

[ExC_05a]: Partial Decoupling known in advance

Sending time:

The *Partial Decoupling known in advance* message is sent by the PCR Coordinator and forwarded by the NEMOs as soon as the IC declares the Partial Coupling known in advance but [REDACTED]

Message content:

Due to severe issues that persist after the Partial Decoupling of the previous Market Coupling Session, **the following area will remain decoupled for delivery day DD.MM.YYYY as well:**

[REDACTED]

For the areas that remain coupled, please follow the Market Coupling rules as usual.
For the decoupled area, please follow the local auction rules.

Note:

The PCR Coordinator will replace the timing in the text of the communication as follows:

- DD.MM.YYYY with the corresponding delivery day (e.g. 20.05.2013).

The PCR Coordinator will remove the area(s) that is/are not decoupled.

The NEMOs will replace the name of the area in the Coordinator's message by the corresponding interconnectors, according to the table found in Annex 1 of this procedure.

ExC_05b: Full Decoupling known in advance

In order to communicate consistently to the regional stakeholders (NRAs, TSOs, and Market Participants) and on a common press release regarding the decoupling, all the PCR NEMOs need to agree beforehand on the Terms of Reference that should be adhered to.

As soon as the IC declares the Full Decoupling known in advance, the PCR Coordinator will send external message ExC_05b to the NEMOs.

This message may be forwarded by the NEMOs to their members, TSOs or other stakeholders.

Message title:

[ExC_05b]: Full Decoupling known in advance

Sending time:

The *Full Decoupling known in advance* message is sent by the PCR Coordinator and forwarded by the NEMOs as soon as the IC declares the Full Decoupling known in advance but by no later than 10:30.

Message content:

Due to severe issues that persist after the Full Decoupling of the previous Market Coupling Session, **the entire price coupled area will remain fully decoupled for delivery day DD.MM.YYYY as well.**

Please follow the local auction rules of each NEMO.

Note:

The PCR Coordinator will replace the timing in the text of the communication as follows:

- DD.MM.YYYY with the corresponding delivery day (e.g. 20.05.2013).

ExC_06: Delay in Market Coupling Results publication due to curtailment at Max price detected in either Lithuania, Finland or Sweden

If the Nordic Max Price Routine has been triggered and the positive Global Preliminary Confirmation has not been generated [REDACTED] (2 minutes before the Regular Publication Time), the PCR Coordinator sends the message *ExC_06* to inform about the delay.

This message may be forwarded by the NEMOs to their members, TSOs or other stakeholders.

This message can never be forwarded [REDACTED].

Remark: As an exception, if a Second Auction was triggered by the message *ExC_01* [REDACTED] or if a Partial Decoupling was declared by the message *ExC_04a*, the PCR Coordinator will not send the message *ExC_06*.

Message title:

[ExC_06]: Delay in Market Coupling Results publication due to curtailment at max price detected in either Lithuania, Finland or Sweden

Message content:

Please be aware that **the publication of the Market Coupling Results is delayed** until further notice. This is due to curtailment at maximum price detected in either Lithuania, Finland or Sweden.

Peak Load Capacity Reserves procedures have been triggered by the Nordic/Baltic NEMOs.

The Market Coupling Results will be published as soon as they are available.

2.2. Regional Communications (not mandatory, but recommended)

The following table lists the messages that are recommended to be implemented at the regional level in order to ensure the harmonization of the communication process across the entire MRC area in case of delays in the publication of the Market Coupling Results or in case of decoupling of a specific MRC interconnector

Table 3 - List of regional NEMO external messages (not originated by PCR)

Regional Message ID	Message
UMM_01a	Delay in final Market Coupling Results publication <i>(for the coupled Areas)</i>
UMM_01b	Delay in Local Market Results publication <i>(for the decoupled Areas)</i>
UMM_01c	Delay in Local Market Results publication <i>(for the decoupled Areas)</i>
UMM_01d	Delay in Local Market Results publication <i>(for the decoupled Areas)</i>
UMM_02	Risk of Partial Decoupling for one or more interconnectors
UMM_02a	Risk of Partial Decoupling for SI-HR interconnector
UMM_03	One or more interconnectors decoupled
UMM_03a	SI-HR interconnector decoupled

UMM_01a: Delay in final Market Coupling Results publication, [REDACTED] (for the coupled Areas)

[REDACTED] in case the Market Coupling Results are still not published or published but not yet confirmed by the positive Global Final Confirmation, the NEMOs may inform their relevant parties about the delay.

This message may be also sent to the Market Participants.

This message is very important for some MRC TSOs in order to postpone the Notification deadlines.

Message title:

UMM_01a: Delay in final Market Coupling Results publication

Sending time:

This message may be sent by the relevant NEMO [REDACTED], if the Market Coupling Results are not yet confirmed by the positive Global Final Confirmation. Following regional agreements, detailed in regional procedures, this message can be mandatory.

Message content:

The Market Coupling process is delayed due to technical reasons or market issues.

Therefore, the publication of the final Market Coupling Results is delayed.

UMM_01b: Delay in Local Market Results publication, [REDACTED] (for the decoupled Areas)

In case a NEMO is decoupled following a Partial Decoupling, local auctions will be run for the decoupled Area(s).

If the Local Market Results are still not published [REDACTED] for the decoupled Area(s), the related NEMO may inform its relevant parties about the delay, according to regional/local procedures.

This message may be also sent to the Market Participants.

This message is very important for some MRC TSOs in order to postpone the Notification deadlines.

Message title:

UMM_01b: Delay in Local Market Results publication

Sending time:

This message may be sent by the related NEMO [REDACTED], if the Local Market Results are not published yet. Following regional agreements, detailed in regional procedures, this message can be mandatory.

Message content:

Please be aware that the Local Market Results publication is still delayed due to technical reasons or market issues.

UMM_01c: Delay in Local Market Results publication, [REDACTED] (for the decoupled Areas)

In case NEMO is decoupled after a Partial Decoupling, local auctions will be run for the decoupled Area(s).

If the Local Market Results are still not published [REDACTED] for the decoupled Area(s), the related NEMO may inform its relevant parties about the delay, according to regional/local procedures.

This message may be also sent to the Market Participants.

This message is very important for some MRC TSOs in order to postpone the Notification deadlines.

Message title:

UMM_01c: Delay in Local Market Results publication

Sending time:

This message is always sent by the related NEMO [REDACTED], if the Local Market Results are not published yet.

Message content:

Please be aware that the Local Market Results publication is still delayed due to technical reasons or market issues.

UMM_01d: Delay in Local Market Results publication, [REDACTED] (for the decoupled Areas)

In case a NEMO is decoupled after a Partial Decoupling, local auctions will be run for the decoupled Area(s).

If the Local Market Results are still not published [REDACTED] for the decoupled Area(s), the related NEMO may inform its relevant parties about the delay, according to regional/local procedures.

This message may be also sent to the Market Participants. This message is very important for some MRC TSOs in order to postpone the Notification deadlines.

Message title:

UMM_01d: Delay in Local Market Results publication

Sending time:

This message may be sent by the related NEMO [REDACTED], if the Local Market Results are not published yet.

Message content:

Please be aware that the Local Market Results publication is still delayed due to technical reasons or market issues.

UMM_02: Risk of Partial Decoupling for one or more interconnectors

For the single submission interconnectors (see MRC_NOR_01): If the CZC of a single submission MRC interconnector is either missing or invalid at the NEMO side [REDACTED], the NEMO responsible for the interconnector needs to state clearly in the IC that there is a risk of decoupling for the concerned interconnector.

For the double submission interconnectors (see MRC_NOR_01): If the CZC of a double submission MRC interconnector is either missing or invalid for both counterpart NEMOs [REDACTED], both NEMOs need to state clearly in the IC that there is a risk of decoupling for the concerned shared interconnector.

The relevant NEMO adds the concerned interconnector in the external message *UMM_02* and sends it to its relevant parties in order to communicate the risk of Partial Decoupling.

The relevant NEMO will also send the *UMM_02* message to the other MRC NEMOs in the region. This message is very important especially for the counterpart NEMO sharing the same interconnector.

The MRC NEMOs may forward this message to their Market Participants or other relevant stakeholders.

Message title:

UMM_02: Risk of Partial Decoupling for one or more interconnectors

Sending time:

This message is sent by the relevant NEMO [REDACTED], if there is a risk of decoupling for the concerned interconnector.

Message content:

Please be aware that **the Market Coupling process encounters severe technical issues or extraordinary market situations for the following interconnector(s):**

CWE internal borders (FR-DE, BE-FR, NL-BE, NL-DE, AT-DE)

Nordic Internal Borders (NO-SE, NO-DK, NO-NO, NO-FI, DK-SE, DK-DK, SE-FI, SE-SE)

DK1-DE

DK2-DE

DK1-NL

FR-ES

FR-GB1

FR-GB1A

IT-AT

IT-CH

IT-FR

IT-SI

AT-SI

NL-GB2

NO2-NL

SE4-DE

SE4-LT

PL-SE4

PL-LT

SI-HR

NI-GB2 (Moyle)

IE/ROI-GB2 (EWIC)

BE-GB1

EE-FI

In case of Partial Decoupling, another message will be sent shortly [REDACTED] to announce the decoupling of the concerned interconnectors.

Disclaimer: The timings are expressed as CET timings!

Note for the relevant NEMO:

The relevant NEMO will remove the interconnector(s) that are not under a risk of being decoupled.

UMM_02a: Risk of Partial Decoupling for SI-HR interconnector for CCP related reasons

If one of the parties, performing the CCP role on SI-HR border is declaring default and is unable to perform cross-border clearing in line with [REDACTED] and bilateral agreements, the concerned NEMO need to declare in the IC the decoupling of the concerned shared interconnector, according to the [REDACTED] procedure.

If the risk of decoupling is declared, the concerned NEMOs [REDACTED] include the concerned interconnector in the external message *UMM_02a* and send it to the relevant TSOs and JAO.

The concerned NEMOs may send this message to their Market Participants.

Message title:

UMM_02a: Risk of Partial Decoupling for SI-HR interconnector for CCP related reasons

Sending time:

This message is sent by the concerned NEMOs [REDACTED] if there is a risk of declaring a CCP default.

Message content:

Please be aware that **the Market Coupling process encounters severe technical issues or extraordinary market situations for the SI-HR interconnector:**

SI-HR

In case of Partial Decoupling, another message will be sent shortly after [REDACTED] to announce the decoupling of the concerned interconnector.

Disclaimer: The timings are expressed as CET timings!

UMM_03: One or more interconnectors decoupled

For the single submission interconnectors (see MRC_NOR_01):

If the CZC of one of the MRC interconnectors are still missing or invalid at the NEMO side [REDACTED] (the Partial Decoupling Deadline for CZC-related reasons), the NEMO responsible for the interconnector needs to declare clearly in the IC the decoupling of the concerned interconnector, according to procedure MRC_FAL_03.

For the double submission interconnectors (see MRC_NOR_01):

If the CZC of a double submission MRC interconnector is either missing or invalid for both counterpart NEMOs [REDACTED], both NEMOs need to declare in the IC the decoupling of the concerned shared interconnector.

The relevant NEMO adds the concerned interconnector in the external message *UMM_03* and sends it to its relevant parties in order to communicate the decoupling of the concerned interconnector.

The relevant NEMO will also send the *UMM_03* message to the other MRC NEMOs in the region. This message is very important especially for the counterpart NEMO sharing the same decoupled interconnector.

The MRC NEMOs may forward this message to their Market Participants or other relevant stakeholders.

Message title:

UMM_03: One or more interconnectors decoupled

Sending time:

This message is sent by the relevant NEMO [REDACTED], if the concerned interconnector has been declared as decoupled.

Message content:

Due to Network Data issues, the following interconnectors are decoupled from the Market Coupling:

CWE internal borders (FR-DE, BE-FR, NL-BE, NL-DE, AT-DE)

Nordic Internal Borders (NO-SE, NO-DK, NO-NO, NO-FI, DK-SE, DK-DK, SE-FI, SE-SE)

DK1-DE

DK2-DE

DK1-NL

FR-ES

FR-GB1

FR-GB1A

IT-AT

IT-CH

IT-FR

IT-SI

AT-SI

NL-GB2

NO2-NL

SE4-DE

SE4-LT

PL-SE4

PL-LT

SI-HR

NI-GB2 (Moyle)

IE/ROI-GB2 (EWIC)

BE-GB1

EE-FI

For the interconnectors that remain coupled, please follow the Market Coupling rules as usual.
For the decoupled interconnector, please follow the local auction rules.

Note for the relevant NEMO:

The relevant NEMO will remove the interconnectors that are not decoupled.

UMM_03a: SI-HR interconnector decoupled for CCP default reasons

If one of the parties, performing the CCP role on SI-HR border is declaring default and is unable to perform cross-border clearing in line with [REDACTED] and bilateral agreements, the concerned NEMO need to declare in the IC the decoupling of the concerned shared interconnector, according to the [REDACTED] procedure.

If the decoupling is declared, the concerned NEMOs [REDACTED] include the concerned interconnector in the external message *UMM_03a* and send it to the relevant TSOs and JAO in order to communicate the interconnector decoupling.

The concerned NEMOs may send this message to their Market Participants.

Message title:

UMM_03a: SI-HR interconnector decoupled for CCP default reasons

Sending time:

This message is sent by the concerned NEMOs at [REDACTED], as soon as they declare the decoupling of the concerned shared interconnector.

Message content:

Due to the CCP issues, the following interconnector is decoupled from the Market Coupling:

SI-HR

For the interconnectors that remain coupled, please follow the Market Coupling rules as usual.
For the decoupled interconnector, please follow the local auction rules.
