## ENTSO-e analysis of the list of services in Art 34 and Annex I of Regulation recast (COM 861)

---

**ENTSO-E supports, in general, the approach of enhancing regional cooperation with additional services, when: i) services are identified in accordance with the Regional Security Coordination model under the SOGL and ii) their efficiency is properly assessed at the relevant geographical level.**

ROC Tasks according to CEP (Art. 34 and Annex I of Recast Directive 714/2009)	ENTSO-E Assessment
(a) Coordinated capacity calculation	Service already established in line with CACM
(b) Coordinated security analysis	Service already established in SOGL – eliminate binding character of recommendation
(c) Creation of common system models	Service already established in SOGL
(d) Consistency assessment of transmission system operators' defense plans and restoration plans	Service already established in ER NC
(e) Coordination and optimization of regional restoration	<b>Major concern - Not sense – real time activity</b>
(f) Post-operation and post-disturbances analysis and reporting	Cooperative processes, involving RSCs as convenient, already exist within ENTSOE

(g) <b>Regional sizing of reserve capacity</b>	<b>Major concern – big change in the operational security framework</b>
(h) Facilitate the regional procurement of balancing capacity	Concerns for the existent operational security framework. Lack of added value and unnecessary rigidity in an wider target model.
(i) Regional week ahead to intraday system adequacy forecasts and preparation of risk reducing actions	Service already established in SOGL
(j) Outage planning coordination	Service already established in SOGL
(k) Optimisation of compensation mechanisms between transmission system operators	<b>Serious concern – political and deep regulatory implications - not sense to approach as purely functional topic</b>
(l) Training and certification	TSOs training for operators, in a jointly basis for relevant topics already exist. Not role for service provider in certifying control room operators responsible for real time. RSCs involvement in training of employees in charge of regional activities.
(m) Identification of regional crisis scenarios if this task is delegated by ENTSO & (o) Tasks related to the identification of regional crisis scenarios if and to the extent they are delegated to ROCs	Both (m) and (n) services refer to the same service. Identification of regional crisis scenarios is described in RPP regulation (art 6.1). Recommend to use text: „Tasks related to the identification of regional crisis scenarios if these tasks are delegated by ENTSOE“.
(n) Preparation and carrying out of yearly crisis simulations in cooperation with competent authorities	Simulation of regional crisis scenarios is described in RPP regulation (art 12.3). Competent national authorities shall coordinate crisis situations at regional level. TSOs, as technical responsible body, will be supported by RSCs. Recomend to use text: „Supporting TSOs and competent authorities in the preparation and carrying out of yearly crisis simulations“
(p) Tasks related to the seasonal adequacy outlooks if and to the extent they are delegated to the regional operational centres pursuant	Cooperative processes, involving RSCs as convinient, already exist within ENTSO-E
(q) <b>Calculate the maximum entry capacity available for the participation of foreign capacity in capacity mechanisms</b>	<b>Serious concern – political and deep regulatory implications - not sense to approach as purely functional topic</b>
