

PowerFacts Europe 2019

Business Network for Innovation Webinar

5 February 2019

12:30-13:50

ENTSO-E and its member TSOs are strongly committed to transparency and to sharing data. When talking about Europe's electricity system, why do we need to consider more than just the sustainability, market and security of supply? Why should we open the energy policy triangle? How are TSOs contributing to developing transparency? What kind of data does ENTSO-E collect and publish? How does the collection and sharing of this data empower citizens and their contribution to Europe's energy transition?

This webinar invites you to a lively discussion with ENTSO-E on how to boost further transparency in the European power system. Join the conversation!

Programme
