Smart grid world of innovations: Dynamic Line Rating

20 March 2019

12:30-13:50

Webinar

Power System Modernization and integration of new and innovative technologies is a key challenge for the TSO community. Dynamic Line Rating is part of the answer. It is a digital technology that has been developed and tested over the last ten years with the view to optimise the use of existing transmission capacity. Interested to know the current updates of this technology, future plans and applications?

This webinar invites you to a lively discussion with experts of the field. Sign up!
