RSC Conference – Session on Adequacy Assessment

Concept and background

Purpose of the session

Participants should illustrate the inputs to adequacy assessment, but especially focus on the outcome of adequacy assessment to illustrate the benefits of this.

Structure of the session

13.15-13.35 – Jérôme Restoueix, Coreso, presents adequacy analysis in simple terms

13.30-13.50 – Group exercise

13.50-14.10 – Group presentations

14.10-14.40 – Kristine van het Erve Grunnet, Dansk Energi, to present the outlook for renewables integration (based on the report VE Outlook 2019). The presentation should illustrate the future needs for renewable energy and the key challenges in integrating this.

Concept of group work

1. Do a short tour of the table with only name and organization
2. Divide each group into couples.
3. Give each couple a few signs and a marker and ask them to discuss where the sign fits.
4. The couples can exchange signs with each other if they wish
5. After some time ask couples to explain some of their choices
6. In a group try to connect the different signs
