Network Code grid connection requirements for generators

Dear Mr Staschus

I am pleased to hear the ENTSO-E General Assembly has unanimously approved the draft Network Code on Requirements for Generators in advance of the 30 June deadline. This reflects many months of work and intense engagement with stakeholders. Indeed the final meeting of the stakeholder group took place yesterday, at which you explained changes from the version of the draft code consulted upon and earlier working drafts. I understand that the process of finalising the minutes of this meeting will in accordance with agreed procedures allow participants one week to comment of the initial draft minutes. These minutes will therefore provide a further reflection of the views of stakeholders on the draft Network Code in addition to the response to the formal consultation process.

In order to allow you to provide ACER with these minutes as part of a comprehensive package alongside the draft Network Code on which to base their opinion, I am happy to accede to your request to formally extend the deadline for ENTSO-E to submit the draft Network Code to 14 July 2012.

Yours sincerely,

Inge Bernaerts
